ABSTRACT

This manual is intended to familiarize data users with the procedures followed for data collection and processing of the High School and Beyond (HS&B) base year (1980) through second follow-up surveys (1984) and to provide the extensive documentation necessary for using the sophomore cohort data files. In addition, information is provided on the origin of the surveys, the various instruments, methodology, sampling, and data collection procedures. The manual also contains the code book for the sophomore data, with information about the responses for each item on the six questionnaires administered. Appendix A contains the following survey instruments: (1) Base Year Sophomore Identification Pages; (2) Base Year Sophomore Questionnaire; First Follow-up in School Sophomore Questionnaire; (3) First Follow-Up Not-Currently-in-School Sophomore Questionnaire; (4) First Follow-Up Transfer Student Supplement; (5) First Follow-Up Early Graduate Supplement; and (6) Second Follow-Up Sophomore Questionnaire. Additional appendices contain critical questionnaire item numbers for the sophomore cohort; code numbers for occupations, postsecondary schools, vocational schools, military specialties, fields of study, created response categories for the transfer and early graduate supplements, certificates and diplomas, and crosswalk between previous codes and the new classification codes; the 1980 sophomore file record layout; the coding scheme for estimated proportions; descriptions of other available data files; classification variables; and guidelines for using a Statistical Analysis System (SAS) procedure with HS&B data. Acknowledgments

The authors wish to thank all those persons who contributed to the production of this manual. For their considerable effort we would like to thank Christine Beard, Tucker Landy, Hymen Bern and Peggy VEVERS in the Information Resources Center. We would like to thank SPSS, Inc. for the use of the source code for the frequencies procedures of release 9. This made it possible to generate a codebook with weights applied only to the column of valid percentages. Special thanks are also extended to Rosemarie Boykin for careful production of the manuscript. Special recognition is extended to Diane Bagues for her assistance in coordinating the production activities. Finally, we would also like to thank those members of the CS staff who have worked closely with us on this project: Helen MacArthur, Project Officer; C. Dennis Carroll, Chief of the Longitudinal Studies Branch; and Jeffrey Owings, Statistician.

FOREWORD

This manual has been produced to familiarize data users and others with the procedures followed for data collection and processing of the High School and Beyond, base year through second follow-up surveys, and to provide necessary documentation for use of the data files.

Using the data tape does not require the analyst to be a statistician or sophisticated computer programmer. Most social scientists and policy analysts should find the tape organized and equipped in a manner that facilitates straightforward production of statistical summaries and analyses. This manual provides extensive documentation of the contents of the data files and how to use them. Chapter 7 and Appendix H, in particular, contain essential information for the user so that he or she can get under- way quickly and with minimal startup costs. A careful reading of Chapter 7 and Appendix H will help users to avoid common mistakes that result in costly computer job failures or incorrect results.

In addition, the user should be aware that CS and NORC have constructed an extensive series of composite variables that can be used in substantive analyses to control for numerous demographic and educational factors. Researchers may wish to use these wherever possible in order to save time and eliminate the need for complicated programming. They are described in Chapter 7 and fully documented in Appendix G.

The rest of the manual provides information on the origin of the surveys, the various components, methods used, and so forth. Chapter 1 begins with the history and background of the study and a description of the Longitudinal Studies Program at the Center for Statistics.

Chapter 2 contains a general description of the survey questionnaires and other forms and procedures used to collect data for the HS&B 1980 senior cohort.

The sample designs for the base year and follow-up surveys are discussed in Chapter 3. Greater detail on the sample design, weighting procedures, sampling errors and analyses of nonresponse patterns may be found in the sample design reports that accompany each HS&B survey.

Data collection procedures, schedules and results are presented in Chapter 4. Chapter 5 describes data control and preparation activities such as monitoring receipt of questionnaires, editing and coding, and follow-up callbacks to respondents. Data processing, including the conversion of questionnaire data to machine readable form, machine editing, and construction of the merged, clean data tapes is the subject of Chapter 6. Finally, Chapter 7 describes the organization and contents of the data files and gives important hints and suggestions for using them.

The manual also contains the codebook for the data, from base year through second follow-up. The appendices include copies of the questionnaires; codes used for schools attended, fields of study, occupations and industries, and so forth; the data layout; composite variables; guidelines for SAS users; and a list of other files available from CS.

1. INTRODUCTION

The High School and Beyond second follow-up survey was conducted during the spring and summer of 1984. Young persons who, either as sophomores or as seniors, had participated in the base year survey in 1980 were contacted for the third time in 1984 and asked to complete a questionnaire detailing their activities since leaving high school. This manual provides guidance and documentation for using the public release data tape for the 1980 sophomore cohort second follow-up survey. This data tape also contains merged data from the base year and first follow-up surveys. This manual also provides background information on the purposes of the study, the sample design, and the data collection and data processing procedures used in each of the three surveys. Similar information on data files and procedures for the elder, senior, cohort are documented in the High School and Beyond 1980 Senior Cohort, Data File User's Manual, Base Year through Second Follow-Up (1984).

1.1 Overview

1.1.1 CS' Education Longitudinal Studies Program

The mandate of the Center for Statistics (CS) includes the responsibility to "collect and disseminate statistics and other data related to education in the United States" and to "conduct and publish reports on specific analyses of the meaning and significance of such statistics" (Education Amendments of 1974 - Public Law 93-380, Title V, Section 501, amending Part A of the General Education Provisions Act).

Consistent with this mandate and in response to the need for policy-relevant, time-series data on nationally representative samples of high school students, CS instituted the National Education Longitudinal Studies (NELS) program, a continuing long-term project. The general aim of the NELS

program is to study longitudinally the educational, vocational, and personal development of high school students and the personal, familial, social, institutional, and cultural factors that may affect that development.

The overall NELS program utilizes longitudinal, time-series data in two ways: (1) each cohort is surveyed at regular intervals over a span of years, and (2) comparable data are obtained from successive cohorts, permitting studies of trends relevant to educational and career development and societal roles. Thus far, the NELS program consists of two major studies: The National Longitudinal Study of the High School Class of 1972 (NLS-72) and High School and Beyond (HS&B). A third major study, to begin in 1988 and to continue throughout the decade of the 1990s, is currently being planned.

The first major study, NLS-72, began with the collection of comprehensive base year survey data from approximately 19,000 high school seniors in the spring of 1972. The NLS-72 first follow-up survey added to the sample nearly 4,500 individuals who had been unable to participate at the time of the base year survey. Three more follow-up surveys were conducted in the fall and winter of 1974, 1976, and 1979, using a combination of mail surveys and personal and telephone interviews. The fifth follow-up survey will take place during the spring of 1986.

The second major survey, HS&B, was designed to inform Federal and State policy in the decade of the 1980s. HS&B began in the spring of 1980 with the collection of base year questionnaire and test data on over 58,000 high school seniors and sophomores. The first follow-up survey was conducted in the spring of 1982, and the second follow-up survey in the spring of 1984. The HS&B third follow-up survey will be carried out in the spring of 1986.

The three survey cohorts (NLS-72 seniors and the HS&B seniors and sophomores) are displayed in Figure 1 according to their initial and subsequent survey years and their modal age at the time of each survey. As shown, the NLS-72 seniors were first surveyed in 1972 at age 18 and have been resurveyed four times since, with the last survey occurring in 1979 when these young adults were about 25 years of age. The HS&B cohorts have been surveyed at points in time that would permit as much comparison as possible with the time points selected for NLS-72. In particular, three types of comparison are possible.

First, the three cohorts may be compared on a time-lag basis (intercohort or intergenerational). For example, the high school seniors of 1972 and the high school seniors of 1980 and 1982 may be contrasted to determine changes over time in the composition, distribution and needs of high school seniors.

Second, fixed-time comparisons can be undertaken. For a given year, the data collection for each cohort can be viewed as a cross-sectional study. It will be possible, for example, to compare employment rates in 1986 of 22-, 24- and 32-year-olds.

The third type of analysis is longitudinal (within cohort) and is designated on Figure 1 by the diagonal lines. Because the history of the age cohort can be taken into account and modeled, analyses can be designed that isolate school and program effects from the effects of differential life experiences.

1.1.2 High School and Beyond and NLS-72

High School and Beyond was designed to build on the NLS-72 in three ways. First, the base year of HS&B included a 1980 cohort of high school seniors that was directly comparable to the 1972 cohort. Replication in 1980 of selected questionnaire items and test items from 1972 made it possible to analyze changes that occurred subsequent to 1972 and their relationship to recent Federal policies and programs in education. Second, the introduction of a sophomore cohort provided data on the many critical educational and vocational choices made between the sophomore and senior years in high school, permitting a fuller understanding of the secondary school experience and its impact on students. Finally, HS&B expanded the NLS-72 focus by collecting data on a range of life cycle factors, such as family-formation behavior, intellectual development, and social participation.

1.2 History of High School and Beyond

1.2.1 The Base Year

The base year survey was conducted in spring 1980. The study design provided for a highly stratified national probability sample of over 1,100 secondary schools as the first stage units of selection. In the second stage, 36 seniors and 36 sophomores were selected per school (in schools with fewer than 36 in either of these groups, all eligible students were included). Special efforts were made to identify those students within the sample who were twins or triplets so that their co-twins or co-triplets could be invited also to participate in the study. (Data from non-sampled twins and triplets are not included in the student data files, but are available in a separate Twin Data File which links questionnaire data for

both sampled and non-sampled twins for special analyses.) Over 30,000 sophomores and 28,000 seniors enrolled in 1,015 public and private high schools across the country participated in the base year survey. (Detailed information about the samples can be found in the HS&B sample design report for the base year: Martin R. Frankel, Luane Kohnke, David Buonanno, and Roger Tourangeau, Sample Design Report, NORC, 1981.)

Certain types of schools were oversampled to make the sample more useful for policy analysis. These included:

- public schools with high percentages of Hispanic students to ensure sufficient numbers of Cuban, Puerto Rican and Mexican students for separate analyses
- Catholic schools with high percentages of minority group students
- alternative public schools
- private schools with high-achieving students

The Hispanic supplement to the sample was funded jointly by the Office of Bilingual Education and Minority Language Affairs (OBEMLA), and the Office for Civil Rights (OCR) within the Department of Education. An additional supplementary sample was drawn from students attending Department of Defense Dependents Schools (DoDDS) located overseas. DoDDS students are not included in the data tapes distributed by CS, however.

Survey instruments in the base year included:

- school questionnaire
- student identification pages
- sophomore questionnaire
- senior questionnaire
- a series of cognitive tests for each cohort
- teacher comment checklist

- parent questionnaire (mailed to a sample of parents from both cohorts)

The student questionnaires focused on individual and family background, high school experiences, work experiences, and plans for the future. The student identification pages contained a series of items on the use, proficiency, and educational experiences with non-English languages, as well as information which would be useful in locating students for future follow-up surveys. Cognitive tests administered to students measured both verbal and quantitative skills. In addition, sophomore tests included achievement measures in science, writing, and civics, while seniors were asked to respond to tests measuring abstract and nonverbal skills. Of the 194 test items administered to the HS&B senior cohort in the base year, 86 percent were identical to those given to the NLS-72 base year respondents.

School questionnaires, which were filled out by an official in each participating school, provided information about enrollment, staff, educational programs, facilities and services, dropout rates, and special programs for handicapped and disadvantaged students. The Teacher Comment Checklist provided teacher observations on students participating in the survey. The Parent Questionnaire elicited information about how family attitudes and financial planning affected postsecondary educational goals.

1.2.2 The First Follow-Up Survey

The first follow-up sample consisted of approximately 30,000 1980 sophomores and 12,200 1980 seniors. It retained the multi-stage, stratified, and clustered design of the base year sample. All students who had been selected for inclusion in the base year survey, whether or not they actually participated, had a chance of being included in the first follow-up survey. Unequal probabilities were compensated by weighting. NORC attempted to survey all 1980 sophomores (including base year nonrespondents)

who were still enrolled in their original base year schools. Certain categories of 1980 sophomores no longer enrolled in their original schools were subsampled (see Section 3) and certain categories were sampled with certainty.

The first follow-up survey also included all non-sampled co-twins (and triplets) who had been identified and surveyed during the base year, provided that the sampled twin was retained for the follow-up. However, non-sampled twins were not included in the probability sample and were not weighted. Their data appear only on a separate Twin Data File. As in the base year survey, the Hispanic Supplement to the first follow-up was supported by OBEMLA and OCR.

A first follow-up school questionnaire was requested of all schools selected in the base year (including those schools that had refused to participate), with the exception of schools that had no 1980 sophomores, that had closed, or that had merged with other schools in the sample. Schools that had received en masse transfers of students from base year schools were contacted to complete a first follow-up school questionnaire and to arrange student survey activities. These schools are not considered to be part of the probability sample of secondary schools and were not given weights. However, survey data from these schools are included in the first follow-up School Data File, and are available for merging with first follow-up student data. The first follow-up survey included a sample of students from the Department of Defense Dependents Schools (DoDDS). All DoDDS base year participants currently living overseas were included in the DoDDS follow-up sample. However, sophomore cohort base year participants living in the U.S. were not contacted for the first follow-up DoDDS survey. DoDDS students were not part of the main probability sample and were not weighted.

First follow-up data were collected through group administrations of questionnaires and tests. The sophomore group administrations were conducted in either the sampled students' high school or an appropriate location off-campus. The location of the administration depended on the survey member's school enrollment status during the data collection period (February through May 1982). Group administrations were scheduled off-campus for sample members who were no longer attending the sampled schools. These individuals (e.g., transfer students, dropouts, early graduates) were contacted by NORC Survey Representatives and brought together in small groups of two to six participants. The same survey administration procedures were followed for both types of group administration.

1.2.3 The Second Follow-Up Survey

The second follow-up survey was conducted during the spring and summer of 1984. Probability samples of approximately 15,000 1980 sophomores and 12,200 1980 seniors were retained for the second follow-up. The sample for the elder cohort was unchanged from the design used for the first follow-up. The sample for the younger cohort was selected from among the 18,500 cases selected in 1982 for the High School Transcripts study. The sample design for the younger cohort was modeled after that used for first and subsequent follow-ups of the elder cohort in that subgroups of special relevance to education policy formation (high school dropouts, members of racial and ethnic minorities, those with data from the base year Parents Survey, those enrolled in postsecondary educational institutions, etc.) were retained in the second follow-up with substantially higher probabilities than others (see Chapter 3). However, all individuals selected for the base year survey had a non-zero chance of retention in the second follow-up regardless of their participation in the base year or first follow-up

surveys. A series of sampling weights has been included in the data file to compensate for unequal selection probabilities and to adjust for differential nonresponse by various sample subgroups.

As in prior survey rounds, the Office of Bilingual Education and Minority Language Affairs provided additional support for the Hispanic Supplement to High School and Beyond in order to increase the size of the Hispanic sample for special analyses.

For the sophomore cohort, a self-administered mail-back questionnaire was the basic method of data collection. Packets containing survey questionnaires, instruction sheets and incentive payment checks were sent to sample members during the first week of February 1984. Two weeks later, postcards thanking respondents for their cooperation and requesting the cooperation of nonrespondents were mailed to all sample members. Two weeks after the cards were sent, trained telephone interviewers called those who had still not responded and urged them to do so. When this failed, interviews were conducted by telephone or in person. Approximately 79 percent of the sophomore respondents mailed back their completed questionnaires, about 16 percent were interviewed by telephone; and about 5 percent were interviewed in person. A method of administration variable, METHOD, is included on the file (see Appendix G). Survey design required that respondents interviewed over the telephone and interviewed in person have a copy of the questionnaire in front of them, to minimize bias due to the method of administration.

2. DATA COLLECTION INSTRUMENTS

Information on the 1980 sophomore cohort has come primarily from questionnaires filled out by students, school administrators, teachers, and parents of students. These data have been supplemented by information on courses taught at sampled schools and the number of students enrolled in those courses and by information from students' high school transcripts. The survey instruments given to school officials, teachers, and parents, as well as the protocols and procedures governing the transmittal of information on course offerings and student transcripts, are described in the user's manuals for each of those data files. (See Appendix F for a complete list of public release data files available from CS.) Features of the sophomore questionnaires used for the first three waves of High School and Beyond are described below. The actual questionnaires are reproduced in Appendix A.

2.1 Base Year (1980) Survey

The base year senior and sophomore questionnaires were very similar. Approximately three-fourths of the items in each version were common to both. Most of the questions in the sophomore questionnaire focused on students' behavior and experiences in the secondary school setting. Also included were questions about employment outside the school, postsecondary educational and occupational aspirations, and personal and family background, and a small number of questions about personal attitudes and beliefs. In addition, to facilitate the recontacting of students in later follow-up surveys, students were asked to provide complete addresses and telephone numbers for themselves and for some other person who would always know their whereabouts.

Sophomores also completed a battery of cognitive tests which are described briefly below:

Vocabulary (21 items, 7 minutes): uses a synonym format.

Reading (20 items, 15 minutes): consists of short passages (100-200 words) followed by comprehension questions and a few analysis and interpretation items.

Mathematics (38 items, 21 minutes): students are asked to determine which of two quantities was greater, whether they were equal, or whether there is insufficient data to answer the question.

Science (20 items, 10 minutes): based on science knowledge and scientific reasoning ability.

Writing (17 items, 10 minutes): based on writing ability and knowledge of basic grammar.

Civics Education (10 questions, 5 minutes): based on various principles of law, government, and social behavior.

2.2 First Follow-Up (1982) Survey

2.2.1 First Follow-Up Sophomore Questionnaire

The purpose of the first follow-up sophomore questionnaire was to document secondary school experiences, especially shifts in attitudes and values since the base year, and to document work experiences and plans for postsecondary education. Almost all of the first follow-up questions had been asked in the base year; most were from the sophomore document, but many had appeared in the senior questionnaire only. Content areas included: education (high school program, courses taken, grades, standardized tests taken, attendance and disciplinary behavior, parental involvement, extracurricular and leisure activities, assessment of quality of school and teachers), postsecondary education (goals, expectations, plans, and financing), work/labor force participation (occupational goals, attitudes

toward military service), demographics (parents' education, father's occupation, family composition, school age siblings, family income, marital status, race, ethnicity, sex, birthdate, physical handicaps), and values (attitudes toward life goals, feelings about self, and so forth).

Approximately 30 items in the sophomore questionnaire were identified as "critical" or "key" questions, for which follow-up was essential if data were missing. (See Appendix B for a list of these questions.)

2.2.2 1980 Sophomore Cohort (Not Currently in High School) Questionnaire

This questionnaire was designed for persons who had dropped out of high school. It focused on the reasons for dropping out and its impact on students' educational and career development. About a dozen of the items were developed especially for students who left school before completion; the remainder of the questionnaire was made up of items used either in the regular 1980 sophomore cohort questionnaire or the 1980 senior cohort instrument. Content areas included: circumstances of leaving school (reasons for leaving, evaluation of decision, plans for obtaining high school diploma or equivalent), participation in training programs and other postsecondary education, work (labor force participation, detailed job history, aspirations, Armed Forces service), financial status (dependency income), marital status (spouse's education, occupation, dependents), demographics (parents' education, father's occupation, race, sex, ethnicity, date of birth), and other personal characteristics (physical handicaps, values, feelings about self).

2.2.3 Transfer Supplement

The Transfer Supplement was completed by members of the sophomore cohort who had transferred out of the base year sample high school to another high school. All of the items in the Transfer Supplement were new items (except a few that were taken from the school questionnaire). Content areas included: reasons for transferring and for selecting a particular school, identification of school, location, grade respondent was in when transferred, entrance requirements, length of interruption in schooling (if any) and reason, type of school (general, specialized), size of student body, and grades. The supplement was brief, taking about 10 minutes to complete.

2.2.4 Early Graduate Supplement

The Early Graduate Supplement was developed for members of the sophomore cohort who graduated from high school ahead of schedule. It documented reasons for and circumstances of early graduation, the adjustments required to finish early, and respondents' activities compared with those of other out-of-school survey members (i.e., dropouts, 1980 seniors.) Content areas included: reasons for graduating early, when decision was made (what grade), persons involved in the decision, course adjustments required, school requirements, and postsecondary education and work experience (the questions for the last area were identical to those in the senior cohort instrument). This supplement took about 10 to 15 minutes to complete.

The sophomore cohort completed the same set of tests as in the base year (see Section 2.1 above).

2.3 Second Follow-Up Survey Questionnaire

The second follow-up sophomore questionnaire included 71 questions clustered around nine major sections: background information, education, other training, military experience, work experience, periods unemployed, family information, income, and experiences and opinions. As could be expected, the information gathered differs substantially from that collected for the first follow-up. By this time the majority of respondents were out of high school and enrolled in postsecondary school, working, or looking for work.

The questionnaire asked for detailed information on schools attended after high school--for up to three schools. Respondents indicated the kind of school attended; hours per week spent in class; the degree, certificate or diploma being sought; and requirements completed. Financial information included questions on tuition and fees and scholarships. Data were gathered also on financial aid from parents to the respondent and to any siblings.

The survey also obtained a work history, including occupation, industry, gross starting salary, gross income, hours worked per week, length of time without a job, length of time looking for work, job training and job satisfaction.

Family information covered the spouse's occupation and education, date of marriage(s), number of children, and income and benefits received by both the respondent and spouse.

3. SAMPLE DESIGN AND IMPLEMENTATION

3.1 Base Year Sample Design¹

In the base year, students were selected through a two stage, stratified probability sample with schools as the first stage units and students within schools as the second stage units. With the exception of certain special strata, which were oversampled, schools were selected with probabilities proportional to the estimated enrollment in their 10th and 12th grades. Within each school, 36 seniors and 36 sophomores were randomly selected. In those schools with fewer than 36 seniors or 36 sophomores, all eligible students were drawn in the sample. Sampling rates for each stratum were set so as to select in each stratum the number of schools needed to satisfy study design criteria regarding minimum sample sizes for certain types of schools. As a result, some schools had a very high probability of inclusion in the sample (in some cases, equal to 1.0), while others had a very low probability of inclusion. The total number of schools selected for the sample was 1,122, from a frame of 24,725 schools with grades 10 or 12 or both.² Sampling strata and the number of schools selected in each are shown in Table 3.1-1.

Substitution was carried out for schools that refused to participate in the survey, but there was no substitution for students who refused, whose parents refused, or who were absent on Survey Day and make-up days.³ Substitution for refusal schools occurred only within strata. In certain cases no substitution was possible because a school was the sole member of its stratum.

*These schools were defined as those having 30 percent or more of enrollment from the indicated subgroup.

The realization of the sample by stratum is shown in Table 3.1-2. Although the sample design specified that students in all but the special strata would be selected with approximately equal probabilities, the probabilities are only roughly equal. In addition, the students in special strata were selected with higher probabilities, in some strata with extremely high probabilities. Moreover, the sample as realized also did not equal the sample as drawn, creating further deviations from a self-weighting sample. Consequently, each school (and student) was assigned a weight equal to the number of schools (or students) in the universes they represented. Since each student's overall selection probability (hence weight) was

further influenced by the sample design for the follow-up surveys, the derivation of student case weights is discussed below. Calculation of school weights is described in the High School and Beyond First Follow-Up (1982) School Questionnaire Data File User's Manual.

Use of weights should lead to correct estimates (within sampling error) of the population of 10th and 12th grade students in United States schools in spring 1980, and correct estimates of subgroups within it. If comparison with other data sources strongly indicates that certain population estimates are too high or too low, further adjustment of weights may be carried out in future versions of public use files. Several analyses conducted since the base year survey have shown consistently that the current weights give estimates reasonably close to those from other data sources.

3.2 First Follow-Up Sample Design (1980 Sophomore Cohort)

The first follow-up sample was based on the High School and Beyond base year sample, retaining the essential features of a multi-stage, stratified, and clustered design. The important features of the first follow-up design were as follows.

All schools selected for the base year sample were contacted for participation in the first follow-up school survey except those that had no 1980 sophomores, had closed, or had merged with other schools in the sample. Schools that received pools of students from base year schools were included in survey activities, and school level data were eventually added to students' records as contextual information, however, these schools were not added to the existing probability sample of schools. Of the 1,015 schools that participated in the base year survey, a total of 40 were dropped from the first follow-up sample: 11 because they had no sophomores in the base year; 5 because they had merged with other schools already in the sample; 17 because they were junior high schools or schools that were closed, sending all their 1980 students to a single "target school;" and 7 because they had closed and sent their 1980 students to a large number of geographically

dispersed schools. The 17 "target schools" that had received pools of base year students were included in survey activities but not added to the sample. Thus, 975 schools from the base year sample plus the additional 17 "target schools" were contacted for the first follow-up survey.

Students (1980 sophomores) still enrolled in their original base year schools were retained with certainty, since resurveying and re-testing them was relatively inexpensive due to the base year clustered design.

Sophomore cohort students no longer attending their original base year schools (e.g., dropouts, early graduates, and those who had transferred as individuals to a new school) were subsampled. Certain groups were retained with higher probabilities in order to support statistical research on such policy issues as excellence of education throughout the society, access to postsecondary education, and transition from school to the labor force.

Students who transferred as a class to a different school were considered to be still enrolled if their original school had been a junior high school, had closed, or had merged with another school. Students who had graduated early or had transferred as individuals to other schools were treated as school leavers for purposes of sampling.

1980 sophomore cohort school leavers were selected with certainty or according to predesignated rates designed to produce approximately the number of completed cases needed for each of several different sample categories. School leavers who did not participate in the base year were given a selection probability of 0.1. Table 3.2-1 shows the number of currently enrolled students and school leavers in each major school stratum.

3.3 Second Follow-Up Sample Design (1980 Sophomore Cohort)

Subsequent to the first follow-up survey, high school transcripts were sought for a probability subsample of nearly 18,500 members of the 1980 sophomore cohort. The subsampling plan for the transcript study emphasized the retention of members of subgroups of special relevance for education policy analysis. Compared to the base year and first follow-up, the transcript study sample design further increased the overrepresentation of racial and ethnic minorities (especially those with above average HS&B achievement test scores), students who attended private high schools, school dropouts, transfers and early graduates, and students whose parents participated in the base year parents survey on financing postsecondary education.

Transcripts were collected and processed for nearly 16,000 members of the younger cohort. A public-use data file containing transcript

information is available from CS. Transcript data may be merged easily with student questionnaire data files using the case identification numbers common to both files. The Data File User's Manual for the HS&B High School Transcripts Study (also available from CS) contains a full description of the sample design and other features of the transcript study.

The sample for the second follow-up survey of the 1980 sophomore cohort was based upon the transcripts study design. Approximately 15,000 cases were selected from among the 18,500 retained for the transcript study. As with the elder cohort, the younger cohort second follow-up sample includes disproportionate numbers of sample members from policy-relevant subpopulations (e.g., racial and ethnic minorities, students from private high schools, high school dropouts, students who planned to pursue some type of postsecondary schooling, and so on). Sample weights have been provided to compensate for differential selection probabilities and participation rates across all survey waves. Tables 3.3-1 through 3.3-4 present several alternative tabulations of the second follow-up sample of the younger cohort. For further details see the High School and Beyond Second Follow-Up Sample Design Report, by C. Jones and B. Spencer (NORC, 1984). The report is available from CS.

NOTE: For this typology, sample members were assigned to ethnic or racial categories on a sequential or hierarchical basis. That is, individuals who reported Cuban or Puerto Rican origin or descent in either the base year or first follow-up were so classified in this typology. High achievement Hispanics were then classified among the remaining non-Cuban/non-Puerto Rican cases. (Since some Cubans and Puerto Ricans were also "High Achievement," the total number of high achievement Hispanics is larger than shown in this table. "Other Hispanics" were then classified from among all remaining cases not assigned to the two previous categories. This procedure was repeated sequentially for each remaining category in the table. The result is a distribution of mutually exclusive categories whose contents sum to the population or sample size. The distributions presented mask considerable overlap among groups within the sample (e.g., Blacks who are also Hispanic).

3.4 Weighting of the Sample

3.4.1 General Approach to Weighting

The general purpose of the weighting scheme is to compensate for unequal probabilities of selection (retention) for the surveys and to adjust for the fact that not all individuals selected for participation in the sample actually participated. The weights are proportional to the inverse of the retention probabilities through all stages of the sample selection process. They are adjusted to reflect nonresponse within strata. Raw weights, reflecting only sample selection probabilities and unadjusted for survey nonresponse, are also included on the data file.

A total of seven weights (a raw, unadjusted weight and six adjusted weights) have been included on the second follow-up public use data files for the 1980 sophomore cohort. The adjusted weights compensate for the absence of various types of data (e.g., survey questionnaires, test scores, high school transcripts) from sample members. Table 3.4-1 shows the seven weights calculated for the sophomore cohort. All sophomore cohort weights, when used with appropriate sample subgroups, expand the samples to the population of approximately 3,781,000 high school sophomores of 1980.

*These base year weights are not the same as those calculated during the base year or first follow-up survey, but are adjusted for retention in the second follow-up.

3.4.2 Weighting Procedures

The procedures for calculating weights consist of two basic steps. First, a preliminary weight is calculated based on the inverse of the cumulative probability of selection for the base year survey, transcript study, and follow-up surveys. (This step produces the "raw weight" stored on each HS&B data file.) The preliminary weight is then adjusted to compensate for "unit" nonresponse, that is, noncompletion of an entire questionnaire or test, or a specified combination of data elements, such as questionnaire and test data, or questionnaire and high school transcript data.

Step 1: Calculation of the raw weights for the follow-up sample. The first step in weighting the sophomore cohort was to develop the raw weights (RAWWT) based on the inverse of the probability of selection (retention) for the various follow-ups and supplemental studies. For sophomores the raw weights for a case equal the raw weights for the transcript sample divided by the conditional probability of selection into the second follow-up given that the case was selected into the transcript sample. These were calculated as:

$$\text{preliminary weight} = W_{1hi} \times (1/P_{2hij}) \times (1/P_{3k})$$

where

W_{1hi} = the base year stage one (school level) weight for the i th school in the h th superstratum (see Frankel, et al, Sample Design Report, 1981, p.153)

P_{2hij} = the base year stage two (student level) selection probability for the j th grade in the i th school of the h th superstratum (see Frankel, et al, 1981, p. 154).

$P3k$ = the overall probability of retention in the transcript and/or follow-up surveys for students in the k th sampling category

which = 1.0 for certainty selections in any wave or combination of waves

and = subsampling rate(s) for noncertainty selections.

$W1h1$, the base year stage one weight, had been calculated during the base year by first taking the inverse of the probability of selection of the school and then multiplying this by a factor that adjusted for ineligible and noncooperating schools. $P2h1j$, the base year probability of selection for each student within his or her school and grade (given that the school had been selected), had been calculated during the base year as equal to the number of students selected in a grade within a school divided by the total number of students in that grade in the school. The value of $P3k$, the probability of selection (retention) in the follow-ups or transcript study, given selection in the base year, depends on the specific sampling category in which a student was placed. These retention rates ranged from 1.0 for students retained with certainty to 0.1 for out-of-school base year nonparticipants.

Step 2: Nonresponse adjustment. In this step, the preliminary weight obtained in Step 1 was multiplied by a nonresponse ratio adjustment factor. For sophomores, these factors were calculated separately for cells defined by:

- (1) Dropout status:
 - (1) non-dropout
 - (2) dropout
- (2) School type:
 - (1) Regular public and alternative
 - (2) Hispanic public
 - (3) Catholic
 - (4) Private non-Catholic

(3) Sex:

- (1) male
- (2) female

(4) Race:

- (1) Hispanic
- (2) non-Hispanic Black
- (3) non-Hispanic White and Other

(5) Base Year test quartile:

- | | |
|----------------------------|----------------------------|
| (0) no test data available | (0) no test data available |
| (1) lowest quartile | (1) below median |
| (2) second quartile or | (2) above median |
| (3) third quartile | |
| (4) highest quartile | |

Within each cell two sums of preliminary weights were computed: the first for all cases in the cell selected for the survey wave or combination of waves (Selections); the second for all cases in the cell for which the specified combination of questionnaire, test and/or transcript data were collected (Participants). The ratio of the two sums (Selections over Participants) provided a factor used to expand the preliminary weight of each participant to compensate for the missing weights of those who were selected but did not participate. The preliminary weights of nonparticipants were multiplied by an adjustment factor of 0 to produce final weights of 0 (zero) for these cases. Thus, the nonresponse adjustment amounts to distributing the preliminary weights of the nonparticipants proportionately among the participants in their weighting cells.

3.5 Results of Weighting

As a check on the adequacy of the sample case weights, NORC analyzed the statistical properties of the weights, the results of which are displayed in Table 3.5-1. This table shows the mean, variance, standard deviation, coefficient of variation, minimum, maximum, skewness, and

kurtosis for each of the weights calculated for the second follow-up data files. More detailed analyses can be found in the sample design reports for each follow-up.

3.6 Standard Errors and Design Effects

Statistical estimates calculated using High School and Beyond survey data are subject to sampling variability. Because the sample design for the HS&B cohorts involved stratification, disproportionate sampling of certain strata, and clustered (i.e., multi-stage) probability sampling, the calculation of exact standard errors for survey estimates can be difficult and expensive. Popular statistical analysis packages such as SPSS (Statistical Package for the Social Sciences) or SAS (Statistical Analysis System) normally calculate standard errors using the assumption that the data being analyzed were collected from simple random samples. As described in detail in the High School and Beyond sample design reports for each

survey wave, the HS&B sample design is, on balance, somewhat less efficient than simple random samples of equal size. Thus, sampling errors generated by SPSS and SAS will normally underestimate significantly the sampling variability of statistical estimates such as population means, percentages and more complex statistics like correlation and regression coefficients.

Several procedures are available for calculating precise estimates of sampling error for complex samples. Procedures such as Taylor series approximations, Balanced Repeated Replication (BRR) and Jackknife Repeated Replication (JRR) vary somewhat with respect both to computational convenience and cost, and to their ability to account for several sources of sampling variability, most notably clustered selection of sample cases. Sampling error estimates presented in this manual were calculated by the method of Balanced Repeated Replication (BRR), using a public-domain statistical subroutine called as a Statistical Analysis System (SAS) procedure. Copies of this subroutine, and instructions for its use with High School and Beyond student sample data, are available upon request from CS.

This section presents several sets of standard errors and design effects calculated on data from three survey waves for the sophomore cohort. (Sampling errors for the 1980 senior cohort are discussed in the user's manual for the senior cohort data files.) The first three tables report statistics from the first follow-up and base year surveys, using the entire first follow-up sophomore cohort sample of nearly 30,000 respondents, and the fourth table presents second follow-up survey data using the second follow-up sample of nearly 15,000 cases.

Table 3.6-1 displays standard errors and design effects for 30 proportions and seven averages based on weighted data from the first follow-up questionnaire and test. Table 3.6-2 provides standard errors for the

same 30 proportions and seven averages, this time based on weighted responses to the base year questionnaire and test, but limited to members of the sophomore cohort who were retained for the first follow-up survey (recall that some school leavers were subsampled).

Table 3.6-3 presents estimates of the change in each of the 37 statistics in the previous tables and the standard error of those change estimates. The change estimates were calculated using weighted individual change scores from members of the sophomore cohort who participated in both the base year and first follow-up. The standard errors for these estimates thus take into account the correlation between base year and first follow-up responses.

Finally, Table 3.6-4 presents standard errors and design effects for 30 estimated percentages based upon second follow-up survey data. Only ten of the thirty-seven items in the preceding tables were included in the second follow-up questionnaire. Twenty additional items, representing estimated percentages of various magnitudes, were added to this table.

The estimates in Tables 3.6-1 through 3.6-4 are weighted estimates. The procedures for calculating these weights are described in Section 3.4, above. The proportions in Table 3.6-1 use the first follow-up weight (FUWT on the first follow-up data files); those in Table 3.6-2 use the base year weight (BYWT on the first follow-up tapes); those in Table 3.6-3 use the panel weight (FANELWT on the first follow-up data files). The averages use the analogous first follow-up weights developed for the test scores. These weights and results apply to the first follow-up sample of nearly 30,000 cases. Similar weights, further adjusted for second follow-up subsampling, have been included on the second follow-up data files.

All of the standard errors in the tables were calculated using the method of Balanced Repeated Replication (BRR). BRR employs a very simple algorithm: it divides the sample repeatedly into half-samples and compares the estimates obtained from each of the half-samples with the estimate obtained from the entire sample. The differences between half-sample and entire sample estimates are used to estimate the standard error. BRR is described in more detail in the High School and Beyond First Follow-Up Sample Design Report, Tourangeau et. al., 1983.

In addition to standard errors, all three tables give design effects for each estimate (DEFFs) and the square roots of each design effect (DEFTs). The design effect is a measure of the efficiency of the sample estimate relative to a simple random sample. It is defined as the ratio of the actual variance of an estimate (i.e., the square of the standard error given in the table) to the variance of the same estimate from a simple random sample with the same number of cases. For proportions, the simple random sample variance is just

$$\text{VAR}(\text{SRS}) = p(1 - p)/n \quad (1)$$

in which

p = the estimated proportion

n = the number of cases with non-missing data

Like almost all national samples, the High School and Beyond sample is not a simple random sample. The High School and Beyond sample departs from the model of simple random sampling in three major respects: the observations are clustered at the school level; major groups (such as students who attended private schools) are deliberately represented disproportionately; and the sample is stratified by type of school. Each of these departures from simple random sampling has a predictable effect on efficiency, an effect that is reflected in the design effect.

Table 3.6-1 shows that the mean design effect for the 37 statistics is 3.59. This is somewhat higher than the mean (2.88) observed during the base year survey (see Frankel, et al, p. A-4). The sample of sophomores for the first follow-up differs from the base year sophomore sample in several key respects. Although the bulk of the base year sophomore sample was retained for the first follow-up with certainty, a few groups were subsampled. The subsampling introduces additional variability into the follow-up weights; the added variability of the weights reduces the efficiency of the sample, which is reflected in the larger design effects. The largest contributors to this loss of efficiency were base year nonparticipants who dropped out of school prior to the first follow-up. This group--consisting of about 500 selected cases--was sampled at a rate of .10; the mean follow-up weight for this group is about 15 times larger than the mean weight for the rest of the sample.

Table 3.6-2 displays estimates for the base year sophomore sample using data from base year participants who were selected for the first follow-up sample. The questionnaire items in Table 3.6-2 are identical to those in Table 3.6-1, but the estimated proportions and standard errors are based on responses to these items in the base year sophomore questionnaire. For the most part, these items were repeated verbatim in the first follow-up questionnaire. In one case, response options were reordered in the follow-up questionnaire. Table 3.6-2 shows that the mean design effect is 2.90; this is very close to the figure (2.88) calculated during the base year. The mean design effect in Table 3.6-2 is lower than the mean in Table 3.6-1 (2.90 vs. 3.59); the estimates for the follow-up sophomore sample are relatively less efficient than estimates for the base year sophomores. This difference probably reflects the increased variability of the follow-up weights. Table 3.5-1 shows that the variance for BYWT is 10,066, while the variance for FUWT is 19,530. As noted above, the chief source of this increased variation in the follow-up weights was base year nonparticipants who dropped out of school; this group was subsampled in the first follow-up at a rate of .10.

Table 3.6-3 shows standard errors and design effects for 37 change statistics. The change statistics were computed by taking the weighted mean of the changes shown by each respondent who participated at both time points. The standard errors (and design effects) thus reflect the fact that whether a respondent was, for example, hard of hearing during the base year is correlated with his or her being hard of hearing during the first follow-up. The change estimates are directional: a negative estimate indicates that fewer respondents fell into the category of interest (e.g., hard of hearing) during the follow-up survey; a positive estimate indicates more respondents fell into the category. is lower than those for Tables 3.6-1 and 3.6-2 (1.95 vs. 3.59 and 2.90).

It probably reflects the fact that complex estimates (such as change estimates) generally exhibit a smaller design effect than simple estimates.

Table 3.6-4 shows that the mean design effect for the thirty estimated percentages from the second follow-up survey is 2.40, a significantly smaller figure than observed for the first follow-up and about equal to that for the base year mean design effect calculated for proportions only (omitting test scores, which may be exceptionally influenced by the clustered sample design). The variability of the DEFFs across the thirty estimates is also much smaller for second follow-up data than for prior waves, but this may be largely due to differences in the lists of items for which estimates, sampling errors, and design effects were calculated.

In general, the overall efficiency of the sophomore cohort second follow-up sample design appears to benefit from both a more proportionate allocation than in prior survey waves and from smaller cluster sizes. The second follow-up design decreased somewhat the disproportionality of the minority group and other subsamples and decreased the relative variance of the sampling weights (RAWWT) from about 1.00 in the first follow-up to about 0.89 in the second follow-up. At the same time, the second follow-up design reduced the average cluster size from approximately 30 in the first follow-up to less than 15 in the second follow-up. Furthermore, the effects of the initial clusters on the efficiency of follow-up samples may be expected to diminish as sample members become more dispersed geographically and more differentiated in terms of life experiences.

Table 3.6-5 presents selected distributional statistics for the DEFF and DEFT factors for nine sample domains (subpopulations) for the same thirty second follow-up items as Table 3.6-4. With the exception of

Hispanics, the DEFTs for subgroups are consistently smaller than for the total population. The relative efficiency of the Hispanic subsample continues to be differentially affected by the somewhat greater clustering of Hispanic sample members in specific schools within relatively few geographical areas. Moreover, the variability of the DEFTs for Hispanics is about twice that observed for most other subgroups. Thus, for analysis of data from Hispanics, the use of a single generalized design effect to inflate simple random sample estimates of sampling errors must be considered subject to greater uncertainty.

The mean design effects given in Tables 3.6-1 through 3.6-5 can be used to calculate approximate standard errors for other estimates not included in the tables. For example, the standard error of a proportion can be estimated using the square root of the expression in (1) times the mean root design effect (DEFT):

$$SE = DEFT \times (p[1 - p]/n)^{1/2} \quad (2)$$

The standard error for a change in proportion can be calculated as the mean DEFT times the square root of the weighted variance of the change scores:

$$SE = DEFT \times (WTVAR/n)^{1/2} \quad (3)$$

in which

WTVAR = weighted variance of the individual change scores

n = unweighted number of valid observations

DEFT = mean of the root design effects for change estimates

The appropriate weight to use in calculating the variance for change estimates for the second follow-up sample is the panel weight (PANELWT3).

¹For further details on the base year sample design see Martin R. Frankel, Luane Kohnke, David Buonanno, and Roger Tourangeau, Sample Design Report, NORC, 1981.

²The sampling frame, defined as the universe of high schools in the United States, was obtained from the 1978 list of U.S. elementary and secondary schools of the Curriculum Information Center, a private firm. This was supplemented by the CS lists of public and private elementary and secondary schools. Any school listed in any of these files that contained a 10th grade, a 12th grade, or both was made part of the frame.

³Apart from substitution for schools that refused, there were a number of schools in the originally-drawn sample that were "out-of-scope," failing to fit the criteria for inclusion in the sample. The sample was then augmented through selection of an additional school for each out-of-scope school, within major strata. Most of the out-of-scope schools were area vocational schools, having no enrollment of their own, although they were listed in the frame as having enrollments.

4. DATA COLLECTION

4.1 Overview

To date, High School and Beyond has compiled data from five primary sources: school administrators, teachers, students, students' administrative records (transcripts), and parents of selected students. In the base year (1980) survey, 1,015 secondary schools served as the primary sampling units for the study. The principal or headmaster of each school was asked to complete a school questionnaire and to provide materials essential for the sampling of students in the tenth and twelfth grades.

Samples of approximately 36 students in each grade were asked to fill out a Student Identification Pages (SIP) booklet (which included several items on the use of non-English languages as well as confidential identifying information) and a student questionnaire, and to take a timed Cognitive (achievement) Test. Teachers of selected students were asked to fill out brief Teacher Comment Forms containing 10 items on student traits and behavior.

During the fall subsequent to the base year survey, data were collected from over 7,100 parents of student respondents (roughly half from each student cohort). These data focused primarily on parents' ability to finance postsecondary education for their sons and daughters.

The first follow-up survey in the spring of 1982 added a second wave of data from 1980 sophomores and seniors. School administrators were again asked to complete a school questionnaire and to provide information on the secondary level course offerings and enrollments for their institutions. In the fall of 1982, high school transcripts were requested for a probability sample of approximately 18,500 members of the 1980 sophomore cohort.

In this section the data and materials collected for the High School and Beyond base year, first follow-up and second follow-up surveys are described. These materials and activities are covered in greater detail in the technical reports and sample design reports for the first and second follow-ups.

4.2 Data and Materials Collected at the School Level

Three broad types of school-level information have been compiled for High School and Beyond: School Questionnaires, Course Offerings and Enrollments, and Teacher Comment Forms. School personnel were also asked to provide such materials as student rosters (see the base year Sample Design Report), class schedules, and so on, which are not part of the public use data base and are not discussed here.

4.2.1 School Questionnaires

In both the base year and the first follow-up, principals and head masters (or their designates) were asked to complete questionnaires containing basic questions on such institutional characteristics as type of control, ownership, total enrollment, proportions of students and faculty belonging to policy-relevant groups, participation in Federal programs, per-pupil expenditures and so on. This information is stored primarily in a separate data file that may be easily merged with student data files or the course offerings file described below. In addition, 19 of the most basic school characteristics have been stored on the student data file in order to facilitate the classification of students according to their school environment.

School questionnaires were sought from all 1,015 participating schools during the base year survey. In the first follow-up survey, school data were requested from those schools still in existence as independent

institutions (i.e., that had not closed or merged with other schools), and that still had members of the 1980 sophomore cohort currently enrolled. Thus, no follow-up data were collected from schools that closed or merged with other schools. Neither was data collected from schools to which respondents had transferred that had no tenth or twelfth grade during the base year survey. In a few instances when students from a base year school were transferred en masse to a different school, or when two schools within a district merged, school questionnaires were sought from the schools now attended by the sampled students. In such cases, data from the new schools were stored on separate school records in the HS&B School Questionnaire data file, and were not physically merged with data for the original school. A link variable ("connecting school ID") is stored both in the record for each base year sample school that sent its students to a first follow-up "target school," and in the record for each "target school" indicating the ID of the base year school where the students were originally sampled and surveyed. Data from the new "target schools" can be merged easily with data records for the students who transferred in groups. No new school data were sought for students who transferred as individuals.

4.2.2 Teacher Comment Forms

Teacher Comment Forms were requested from all faculty members who had taught any HS&B sampled students during the 1979-80 academic year. These data were collected only during the base year survey. Teacher Comment Forms asked for perceptions about whether each selected student would probably go to college, was working up to potential, seemed popular with others, had talked with the teacher about school work or plans, seemed to dislike school, had enough self-discipline to hold a job, and had a physical or emotional handicap that affected school work. Data from these forms have

been compiled into separate files with over 19,000 forms for each of the two student cohorts.

4.2.3 Course Offerings and Enrollments--Academic Year 1981-82

In the first follow-up only, school administrators were asked to provide materials that would allow the construction of a complete listing of all secondary level courses offered, complete with enrollment figures, for the 1981-82 academic year. This information was not requested in any prescribed format, but was accepted in a variety of forms. In many instances, schools were able to provide computer-generated printouts of Master Teaching Schedules. In others, it was necessary to merge information from several sources such as annotated course listings, catalogs, and enrollment records. Procedures were established to maximize the completeness and accuracy of these materials (see below). In the data file constructed from these documents, each school is represented by a block of records that indicate for each course offered a 6-digit course identification number, the duration and timing of the course (e.g., year-long, first semester, third quarter), the credits earned for successful completion, and the total number of students enrolled in the course during the entire 1981-82 academic year. This data set may be merged easily with the School Questionnaire file, the Student Data files, or the High School Transcripts file. In both the Course Offerings and Enrollments and the High School Transcripts files, individual courses were coded using the Classification of Secondary School Courses (CSSC) developed under an CS contract.

4.2.4 Data Collection Procedures--School-Level Data

In both the base year and first follow-up surveys, it was first necessary to secure a commitment from the administrator of each sampled

school to participate generally in the study. In the case of public schools, the process was begun by contacting the chief state school officer (usually the state Superintendent of Schools) to explain both the objectives of the study and the data collection procedures (especially those for protecting individual and institutional confidentiality), and to identify the specific districts and schools selected for the survey.

Once approval was gained at the state level, contact was made with District Superintendents and finally, once district approval was granted, with school principals. Similarly, wherever selected private schools were organized into an administrative hierarchy (e.g., Catholic school dioceses), approval was obtained at the superior level before the school principal or headmaster was approached. Within each cooperating school, principals were asked to designate a School Coordinator who would serve as a liaison between the NORC High School and Beyond staff and the school administrator and selected students. The School Coordinator (most often a senior guidance counselor) handled all requests for data and materials as well as all logistical arrangements for student-level data collection on the school premises.

In the base year, the School Coordinator assisted in assembling the materials for student sample selection. In the first follow-up, the coordinator (usually the same individual) reviewed the school sample and assisted in determining students' current enrollment status, and in locating current addresses for selected sophomore cohort school leavers (i.e., transfers, dropouts and students who graduated ahead of schedule) and senior cohort base year nonrespondents.

School questionnaires were sent to coordinators in the fall of 1979 for the base year and in the fall of 1981 for the first follow-up survey. Student survey sessions were conducted between February and June of 1980 and

1982. In most cases, school questionnaires were completed and returned to NORC before the spring survey sessions. Most of the remainder were collected by NORC Survey Representatives who visited participating schools to conduct student survey activities. During the first follow-up, about one hundred additional school questionnaires were obtained in the fall of 1982, when schools were recontacted to supply student transcripts for a sample of 1980 sophomores. This additional contact with the schools also offered an opportunity to retrieve missing data from critical items in the school questionnaires.

In the base year, coordinators were also asked to distribute Teacher Comment Forms to faculty members who might have taught HS&B sampled students during the 1979-80 academic year. Completed forms were returned to NORC in pre-addressed, prepaid envelopes by the teachers themselves.

During the first follow-up, coordinators were asked to assemble course offerings and enrollments data to be given to Survey Representatives at the time of the student survey sessions. Although nearly 90 percent of the schools provided course offerings information during the spring of 1982, the majority were not able to provide enrollment figures until the fall of that year, when the schools were recontacted for student transcripts. Substantial numbers of schools could not provide enrollment data at all.

Finally, School Coordinators were notified during the first follow-up data collection period that they would be recontacted the following fall for their assistance in conducting the Student Transcript Survey. Each coordinator was sent a packet of materials including a list of selected students and a reimbursement voucher to cover the costs of reproducing up to 36 (or 72 in the case of merged schools) high school transcripts for 1980 sophomores. (If selected students had transferred individually to schools not in the HS&B sample, transcript requests were sent directly to the

principal of the last school the student attended.) Initial transcript requests were followed several weeks later by a combination of letters and telephone calls offering further assistance (re mailing of packets, etc.) to each nonresponding school. Follow-up activities continued through January of 1983.

Response Rate	98%	98%	96%	73%	96%	87%

^aNote: Of the 992 schools from which full participation was sought in the first follow-up, 975 were among the initial 1,015 that participated in the base year, and 17 were included because they received en bloc transfers of all students from base year HS&B schools. Of the 975 base year schools eligible for the first follow-up, school questionnaires were obtained from 956 or 98 percent.

^bTransfer schools are defined as those to which 1,065 HS&B students had transferred as individuals.

^cOf the 949 schools that responded, 4 were unable to furnish transcripts because the sampled students had received a GED only, and had not graduated.

^dOf the 771 schools that responded, 115 were unable to furnish transcripts because sampled students had never registered, transferred again, dropped out before earning credits, etc.

student transcript collection efforts. (Completion rates cannot be calculated for Teacher Comment Forms due to the absence of information on the total number of faculty members who had taught HS&B sampled students during the base year.)

4.3 Student Data Collection

In the base year survey, a single data collection methodology--on-campus administration of questionnaires and tests to the entire sample of students from each selected school--was employed for both student cohorts. In the first follow-up, members of the younger cohort (most of whom were then in the twelfth grade) were resurveyed using methods similar to those of the base year survey. Members of the 1980 senior cohort were surveyed primarily by mail. Nonrespondents to the mail survey (approximately 25 percent) were interviewed either in person or by telephone.

4.3.1 Base Year Data Collection

Base year student data were collected from students in 1,015 high schools between February 1 and May 15 of 1980. Sophomores and seniors within each school were gathered in separate groups on scheduled survey days, and completed the questionnaires and tests in one session. NORC Survey Representatives (often assisted by the School Coordinator) were present with each group to explain survey procedures and to answer questions. An Orientation Day was held in each school, usually one to two weeks prior to Survey Day, in order to inform sampled students about the objectives of the study and to brief them on the requirements of participation, the voluntary nature of the study, and the procedures for protecting the confidentiality of their responses. Efforts were made during orientation sessions to identify all twins and triplets selected into the High School and Beyond sample and to recruit the participation of the non-

selected twins and triplets in the study. Finally, a check was made during the orientation to see that parental permission forms had been obtained for all selected students in each school or district where this step was required.

The first step for students in each survey session was to complete a Student Identification Pages (SIP) booklet, which requested information about how the student might be located if selected for future follow-up. To preserve student confidentiality, these documents were handled, shipped, and stored separately from all other student instruments. The latter section of the SIP booklet contained several questions designed to identify students who had been exposed to non-English languages outside of formal school courses. Students having such exposure then answered a special series of questions about their use of and proficiency in the non-English language, as well as their bilingual education experiences. These data were processed into a separate file containing responses from over 11,300 students from both cohorts.

Students were then given one hour to complete the questionnaires. During this time, Survey Representatives scanned the completed SIP booklets for missing or incomplete responses. At the end of the allotted time, questionnaires were collected. Students were given a ten-minute break, during which Survey Representatives reviewed the questionnaires for completeness. Further attempts were made to obtain any data missing from either the SIP booklets or the student questionnaires before students left the survey session.

The cognitive tests were administered following the completion of the questionnaires. Tests consisted of six timed segments. The Senior Test Booklet also included a series of items on student perceptions about the six sub-tests and how the student was feeling while taking the test.

When the testing was completed, students with incomplete SIP booklets or questionnaires were asked to remain so that missing data could be captured. For certain questionnaire items considered crucial to the analytical objectives of the study, students were given the option of marking a special oval in the question field indicating that they did not wish to answer.

Following the survey session, NORC Survey Representatives made arrangements with School Coordinators to conduct make-up sessions for students who were not able to attend the first Survey Day. Survey Representatives then packaged all completed student questionnaires and test booklets for shipment to NORC's optical scanning subcontractor for the conversion of student responses to machine-readable form. Student Identification Pages, parental permission forms (if any), and administrative documents were returned to NORC's central offices for processing and storage.

Table 4.3.1-1 displays separately for each student cohort the numbers and percentages who completed base year questionnaires and tests. Test completion rates were generally lower than questionnaire completion rates because there was not always enough time for students to finish both instruments. In a few cases, too, districts did not allow testing by an outside research group.

4.3.2 First Follow-Up Data Collection--1980 Sophomore Cohort

Chapter 3 above describes the dual nature of the 1980 sophomore cohort first follow-up sample. During the fall of 1981, School Coordinators reviewed printed rosters of HS&B sophomore cohort members originally selected at their schools and indicated which of the students were still enrolled at the same schools and which had transferred to another school, graduated early, or left school without graduating. School Coordinators were also asked to supply current name and address information for all individuals in the latter three categories, and then return the rosters to NORC. Students listed on the rosters had been previously annotated with a sampling flag or marker reflecting predetermined selection probabilities for several student strata as described in Chapter 3. Individuals who were both flagged and identified by School Coordinators as dropouts, transfers, or early graduates were then confirmed as selections into the school leaver sample. School leavers who were not predesignated by sampling procedures were classified as ineligible for the first follow-up.

It is important to note that the first follow-up sample design specifications state that the eligibility of students for follow-up is

defined by their enrollment status as of the scheduled Survey Day at their base year schools. It was therefore necessary for School Coordinators to repeat the review of the original student rosters on Survey Day. Any changes in student status from the time of the original roster review (e.g., students transferring or leaving school, dropouts returning to full-time school enrollment) were immediately implemented by Survey Representatives in accordance with sample design specifications. By the completion of the data collection period, 25,150 students had been classified as currently enrolled in base year schools (or designated receiving schools--see below), and 4,587 had been selected into the school leaver sample (1,290 transfers; 696 early graduates; 2,601 dropouts).

4.3.2.1 On-Campus Data Collection

On-campus data collection arrangements were sought for all sophomore cohort members who were still enrolled in the schools they attended during the base year, or who had transferred as part of a class to another school in the same district. (This latter group included students who attended a junior high school during the base year, as well as those whose base year schools closed, were destroyed or merged with other schools not in the HS&B sample.) Survey Days were successfully arranged in 952 school buildings. A total of 40 schools declined to hold survey activities on-campus during regular school hours. In most of these instances, administrators of noncooperating schools assisted the survey effort by reviewing student rosters, identifying school leavers, and updating address information for sophomore cohort members. Many officials assisted NORC Survey Representatives in securing alternative sites for survey sessions and in encouraging sampled students to participate in off-campus administrations.

Survey Days were conducted between February 15 and June 11, 1982.

Activities generally paralleled those used in the base year. Teams of NORC Survey Representatives, assisted by School Coordinators, administered student questionnaires and tests to groups averaging 20 students in size on the first scheduled Survey Day. Make-up sessions were scheduled for all schools in which the student-level response rate was less than 95 percent. About 60 percent of the make-up sessions were conducted by NORC Survey Representatives and 40 percent were administered by School Coordinators. By the end of the data collection period, 96 percent of the students eligible for on-campus survey administration had been resurveyed.

Two alternative data collection strategies were implemented for students enrolled in the 40 schools that declined to allow on-campus sessions. Students enrolled in the 27 noncooperating schools located within 100 miles of at least one NORC Survey Representative were contacted by telephone, screened for current enrollment status, and, if not classified as a school leaver, invited to participate in a group survey session at a local public facility. (The screening process also allowed Survey Representatives to confirm the status of school leavers who had been predesignated for follow-up and to invite them to survey sessions as well; see below.) Over 95 percent of the 719 students currently enrolled at these 27 refusing schools were resurveyed in this manner.

There was a final group of 13 nonparticipating schools located over 100 miles from NORC Survey Representatives; it would have required unjustifiably large expenditures to administer the survey at these schools using similar methods. Students in these schools were screened by telephone for their current enrollment status and recruited to participate as appropriate. In these instances, however, eligible students were sent packets containing questionnaires, supplements, and other materials through the mail. A total of 340 students were found to be currently enrolled in

these 13 schools; about 89 percent returned completed questionnaires to NORC offices. Cognitive test data were not collected from these sophomore cohort members.

4.3.2.2 Off-Campus Data Collection

Off-campus survey sessions were held for 1980 sophomore cohort school leavers between February 20 and June 25, 1982. Because it was necessary to reconfirm the enrollment status of each student as of the first scheduled Survey Day at students' base year schools, off-campus group administrations were always scheduled after Survey Days at the schools where selected transfers, early graduates and dropouts had formerly been enrolled. Once their enrollment and selection status was established, Survey Representatives contacted school leavers by telephone and invited them to take part in group sessions to be resurveyed and retested. All school leavers were offered monetary incentives for participation (\$5 for filling out the follow-up questionnaire and \$10 for taking the test), and were reimbursed (up to \$10) for travel expenses to and from the survey sites.

Off-campus survey administrations were conducted using procedures as similar as possible to on-campus sessions. Survey Representatives scan-edited completed questionnaires during the testing period and attempted to obtain missing or incomplete data before participants left the sites. Because the off-campus sessions typically involved only two to five school leavers, these administrations were handled by a single Survey Representative.

Although 85 percent of the participating school leavers were resurveyed in group administrations, a substantial minority were not able to attend scheduled sessions. Survey Representatives were able to personally interview and retest 465 of these individuals whose home addresses were

close to areas where other survey activities were under way. In addition, 92 interviews were conducted over the telephone, and 60 completed questionnaires were returned by mail by school leavers whose residences were more than 50 miles from the closest Survey Representative. No first follow-up test data were obtained for the latter two groups.

Table 4.3.2.2-1 displays data collection results separately for dropouts, transfers, and early graduates.

4.4 Collection of Student Transcripts

During the fall of 1982, high school transcripts were collected for a sample of 1980 sophomores. Approximately 18,500 students were selected using a disproportionate allocation that balanced the need to maximize the numbers of selections from policy-relevant subgroups (e.g., dropouts, racial and ethnic minorities, twins) against the need for statistical efficiency in the computation of nationwide estimates from the data. Survey materials were sent to approximately 1,900 schools (including HS&B sample schools and schools to which 1980 sophomores had transferred) in the last week of

September 1982. Follow-up calls to School Coordinators and principals were initiated on November 4, 1982 and continued as necessary through January of 1983.

Transcripts were received and processed for approximately 16,200 students (88 percent of the sample). The response rate for HS&B sample schools (92 percent) was significantly higher than that obtained for schools to which HS&B students had transferred (83 percent). The most common reasons for failure to obtain transcripts were the absence of a signed form from a student authorizing school officials to release the transcript (affecting about 3 percent of the students), and district or school policy against releasing student transcripts for research purposes (affecting about 2 percent of students).

Student Transcript Data Files contain records for each student listing, for each secondary level course taken, a 6-digit course identification number, the school year and term that the course was taken, the credits earned and the final grade. Courses that are part of special curricula or programs (e.g., bilingual education, special education, programs for gifted students) are so identified. In addition, each student's record contains information on the student's rank in class, overall grade point average, numbers of days absent for each school year, number of suspensions, the date and reason the student left the school, and identifying codes and scores for any standardized tests taken by the student (SAT, PSAT, ACT, or advanced placement tests). This data file is not part of the student questionnaire and test score data file but may be easily merged with the latter by means of the common student identification number.

4.5 Second Follow-Up Data Collection

By the time of the second follow-up, the sophomore cohort was out of school and data were collected through a mailed questionnaire. To obtain correct addresses, an address update letter was mailed to members of both HS&B cohorts on November 23, 1983. The address update packet included a cover letter, address update form, return envelope, and newsletter. In December, trained telephone interviewers at NORC's Central Office began locating activities for the cases whose letters were returned as undeliverable. By the time the questionnaires were mailed, addresses had been found for all but about 300 survey members (of both cohorts) whose locating letters had been returned by the Post Office as undeliverable. These 300 cases then were sent to field interviewers for further locating attempts.

Second follow-up survey questionnaires were mailed to 14,825 members of the sophomore cohort (minus those for whom addresses could not be found) between February 13 and 17, 1984. Along with the questionnaire, respondents received a cover letter, an instruction sheet, a place marker, a pencil, a response incentive check for five dollars, and an addressed prepaid envelope for returning the questionnaire to NORC. (Appendix A contains a copy of the questionnaire.)

By the end of the third week, 37.8 percent of the sophomores had returned their questionnaires. In order to obtain useful information on the effectiveness of "Thank you/Reminder" postcards in boosting response rates, two different postcard mailings were scheduled. At the end of the third week, half the sample was sent a postcard, thanking them for sending in the questionnaire or encouraging them to do so. At the end of the seventh week, those respondents who had not yet mailed in their questionnaires received a telephone reminder followed by a postcard. Completion rates were compared

at the end of week ten. Among the respondents who had been sent the reminder at the end of the third week, 56.9 percent (of both cohorts) had returned their questionnaires. Only 53.3 percent of the second group returned their questionnaire. Hence, mailing the postcard at the end of the third week appeared to boost the response rate by about 4 percent compared to telephoning and mailing a postcard during the seventh week.

Remaining telephone prompts began at the beginning of the sixth week. At that time, 44.9 percent of the sophomore cohort had returned completed questionnaires. Compared to the first follow-up, many more sample members were declared temporarily unlocatable at this stage of data collection. They had either moved after the fall locating letter was sent out or had failed to report any change of address. Therefore, Survey Representatives had to spend considerable time obtaining additional locating information in order to trace nonrespondents.

By week nine, 9,043 or 60.6 percent of the questionnaires had been received. Telephone and personal interviews began then and continued into the month of August, at which time the field period was closed. The final number of completed questionnaires for the sophomore cohort was 13,682 or 92 percent of the sample of 14,825. About 79 percent of the respondents completed and sent in questionnaires without assistance (self-administered); 15.6 percent were interviewed by telephone, and 5.3 percent were interviewed in person.

Tables 4.5-1 and 4.5-2 display second follow-up data collection results by student type and sampling strata.

5. DATA CONTROL AND PREPARATION

Data control and preparation refers to a series of procedures governing the preparation of completed questionnaire data for conversion to machine readable form by optical scanning. The process involves monitoring the receipt of completed documents from respondents and the field interviewing staff; editing completed instruments for missing information and proper adherence to routing or skip instructions; assigning numeric codes to responses such as schools attended, occupations, military specialties and so on; retrieving missing information and resolving inconsistencies in responses to specified questions; and validating a percentage of the interviews conducted in person or by telephone.

5.1 Base Year Procedures

The procedures for data control and preparation were significantly different in the base year compared to the first and second follow-ups. Since the base year student instruments were less complex than the follow-up student questionnaires (for example, they employed no skip patterns and required no open-ended coding), the completed documents were sent by Survey Representatives directly from the schools to the scanning subcontractor. The scanning computer was programmed to perform the Critical Item Edit (described below) and to produce reports that identified the critical items with missing information for each case. The reports were sent to NORC, where data retrieval was completed. (The base year Teacher Comment Forms were also sent directly to optical scanning, but no data retrieval was conducted.)

The base year school questionnaires and parent questionnaires were converted to machine readable form by the conventional key-to-disk method at NORC. In the base year, most school questionnaires were completed and

returned to NORC before the scheduled Survey Day at the school; the remainder were collected by Survey Representatives during their Survey Day visits. This sequence permitted retrieval of missing school questionnaire data for most institutions during the course of scheduled survey activities, obviating the need for additional contact with school officials.

5.2 First Follow-Up Procedures

5.2.1 Shipping and Receiving Documents

All documents shipped to NORC from the field (e.g., the sophomore questionnaires and tests completed on Survey Day in the schools), and all of the instruments shipped from NORC to the scanning contractor for optical scanning, were accompanied by a detailed transmittal form that listed each case in the shipping carton. Upon arrival at NORC, the contents of each carton were thoroughly inspected by the receipt control supervisor. Documents were assigned disposition codes which characterized the completion status for each case in terms of both respondent type and the presence or absence of relevant materials. Any discrepancies were resolved with the appropriate Survey Representatives or Field Managers within a 24-hour period. Data control disposition codes were then entered into the in-house processing segment of NORC's Automated Survey System (NASS), and routed to the appropriate processing station. Additional updates were made to the NASS record for each case as remaining procedures (editing and coding, data retrieval, interview validation) were completed. A final entry into the NASS record was made when the case was processed for shipment for optical scanning. The transit of large shipments of edited instruments to WIS was safeguarded by the use of Brinks Incorporated, which provided portal-to-portal secure delivery.

5.2.2 Editing and Coding

A staff of 16 coder/editors handled over 40,000 student questionnaires and nearly 1,000 school questionnaires. Editors and coders were trained for one week, followed by a 100 percent review of the first 40 cases edited by each trainee. Those not performing satisfactorily were either terminated or retrained, depending upon the severity of the problem.

The first data preparation step for each completed questionnaire was the Critical Item Edit. (The large sample and lengthy data collection instruments of High School and Beyond made 100 percent editing of each questionnaire infeasible.) A list of approximately forty items in each of the major survey instruments were designated as "critical" or "key" items (see Appendix B). Items were so designated if they were deemed to be crucial to the methodological or analytical objectives of the study. Most of the key items are of self-evident policy relevance; others were chosen as a means of checking whether survey respondents had properly followed routing instructions, or whether they had inadvertently skipped portions of the questionnaires. Cases were deemed to have failed the Critical Item Edit if the respondent did not provide a codeable response to any single key item. Thus, omissions, illegal multiple responses and vague, unclear responses were grounds for failure. In each document, items failing the edit were flagged and the document was routed to the data retrieval station, where respondents were called by telephone to obtain missing information or otherwise resolve the edit failure. In addition to the Critical Item Edit, the following coding tasks were performed.

1. Occupation and industry were coded according to the U.S. Department of Commerce, Bureau of the Census, Classified Index of Industries and Occupations, 1970 and the U.S. Department of Commerce, Bureau of the Census, Alphabetical Index of Industries and Occupations, 1970. The 1970 edition was used so that the coding on High School and Beyond would coincide

with that used on NLS-72. The codes can be found in Appendix C.1.

2. Postsecondary schools were coded using six-digit FICE codes. The directories included the CS Directory of Postsecondary Schools with Occupational Programs, 1975-76, and the CS Education Directory, Colleges and Universities, 1981-82. Codes were created for unique schools not listed in these directories. The FICE codes and the created codes are located in Appendix C.2.
3. Military codes for specialized schools, specialty, and pay grade were classified according to the Department of Defense, Occupational Conversion Table, Enlisted, 1974. A copy of this edition was obtained from Research Triangle Institute, so that High School and Beyond military coding would be compatible with that used for NLS-72. The military codes are located in Appendix C.3.
4. The major field of study indicated for each postsecondary school attended was converted to a six-digit code using the HEGIS Taxonomy. The directories used included: HEW, CS, A Taxonomy of Instructional Programs in Higher Education, 1970; and HEW, Vocational Education and Occupations, 1969. These directories were also used for field of study coding on NLS-72. The field of study codes are located in Appendix C.4.
5. Open-ended questions in the Early Graduate and Transfer Supplements were coded according to the categories listed in Appendix C.5.
6. To ensure compatibility, the various licenses, certificates and other diplomas received by respondents were coded according to two-digit values created for NLS-72. These codes are located in Appendix C.6.
7. Numerical responses were transformed to darkened ovals to facilitate optical scanning.

In general, the survey instrument for the 1980 senior cohort contained many more open-ended questions than that used for the sophomore cohort. An exception was the instrument completed by 1980 sophomores who left school without graduating, which included many of the employment-related items from the senior cohort questionnaire. Thus, instruments from sophomores still attending their same base year school required an average

of 10.9 minutes for editing and coding, while senior questionnaires took an average of 16.4 minutes to edit and code and instruments from sophomores no longer attending their base year high schools averaged 19.4 minutes.

5.2.3 Data Retrieval and Validation

The proportion of cases requiring retrieval varied widely between the sophomore and senior cohorts due to differences in the method of administration. Senior instruments completed in an unsupervised setting had a 43.6 percent retrieval rate while sophomore instruments were notably below that at 16.5 percent. The lower retrieval rate among sophomores was achieved through the use of on-site edits performed by Survey Representatives on school Survey Days and at off-campus group administrations. Questionnaires with missing or incomplete information on critical items were handed back to the student for corrections. The students generally complied, time and circumstances permitting.

Interview validation requires contacting selected respondents again in order to repeat the collection of specified data. Data from validation calls (conducted from the central office) are then compared with data collected by Survey Representatives through personal or telephone interviews. Discrepancies in the two data sources are investigated and, if not resolved, the respondent is re-interviewed. Further validation is then conducted for an interviewer whenever validation failure occurs, and follow-up action is taken as appropriate.

Since the process of validating an interview also requires a phone call to the respondent, cases requiring both validation and retrieval were handled in a single call to lessen impositions on the respondent's time. As noted earlier, approximately 10 percent of the instruments completed in

person or by telephone were validated. No cases were found to fail validation checks in the first follow-up.

5.3 Second Follow-Up Procedures

5.3.1 Shipping and Receiving Documents

Respondents and field interviewers mailed questionnaires to NORC. Arriving documents were separated by disposition codes which identified completed cases by method of administration (i.e., self-administered, telephone interview, or personal interview). These disposition codes were then entered into NORC's Automated Survey System (NASS). As cases were routed through the data preparation system, an additional in-house update was made to the NASS record as each editing, coding, and retrieval procedure was completed. Codes designating validation cases were also entered, and a final entry into the NASS record was made when the cases were processed for shipment to the scanning contractor. As in the first follow-up survey, a detailed transmittal listing every case in each carton accompanied the instrument shipment to the optical scanning firm.

A staff of 12 coder/editors processed nearly 26,000 student questionnaires. Coder/editors were trained for 1-1/2 days. After a 100 percent review of the first 20 cases, coders not meeting quality control standards were either reassigned or retrained.

As in the first follow-up, the Critical Item Edit was the first data preparation step to be completed. A list of 37 items in each survey instrument were designated as "critical" or "key" items (see Appendix B for the list of critical items).

The second follow-up survey marked the first time that respondents entered and filled in optically scannable grids for all of their answers to numeric questions. Therefore, in addition to the Critical Item Edit, all

numerical responses were examined for correct entry (e.g., right justification, omission of decimal points).

Other data preparation tasks included coding occupational and industrial information and licenses and certificates, using the same sources as used for the first follow-up survey.

Military coding of specialized schooling, specialty, and pay grade were also coded utilizing an updated Department of Defense (DoD) coding scheme, Occupational Conversion Table, Enlisted/Officer/Civilian (December 1982). However, each DoD officer code, a numerical value followed by an alphabetical value, had to be converted to a three-digit number. To make the conversion, the numerical value of the officer DoD code was entered in the first column, followed by a two-digit numerical value corresponding to each letter of the alphabet (01-26). To ensure that officer codes are not mistaken for enlisted codes, a "flag" has been placed at the beginning of each respondent file where an officer code is present. Coast Guard training and assignments received appropriate Navy codes, a procedure used by the Defense Manpower Center.

Coding of the names of postsecondary schools attended by respondents was accomplished by using the CS Education Directory, Colleges and Universities, 1982-1983 and an updated source for vocational school programs: the CS Directory of Postsecondary Schools with Occupational Programs, 1982. As in the first follow-up, codes were created for new schools not listed in these directories. The field of study information was coded using A Classification of Instructional Programs (C.I.P.). Produced by CS in 1981, this directory replaces A Taxonomy of Instructional Programs in Higher Education (HEGIS Taxonomy, 1972) and the Standard Terminology for Curriculum and Instruction in Local and State School Systems (known as Handbook VI), which were used in the first follow-up. To provide continuity

between the first follow-up and the second follow-up education data, Appendix C.7 contains crosswalks between the HEGIS Taxonomy and the CIP, and between Handbook VI and the CIP.

Due to the similarity of the second follow-up senior and sophomore questionnaires, coding times were comparable and averaged 9.7 minutes. This represented a decrease in coding time for the senior questionnaire of almost 50 percent compared to the coding of the first follow-up self-administered senior questionnaires. The reduction in coding time was achieved by having respondents enter numerical data directly into optically scannable grids. (In the first follow-up, respondents were instructed to enter numbers, and coders later transferred the numbers into optically scannable grids.) As a result, editor-coders had only to review respondents' data and make corrections as needed.

5.3.2. Data Retrieval and Validation

The proportion of cases requiring missing data retrieval or other fail-edit callbacks for each cohort was similar: 29.1 percent for the senior cohort and 32.5 percent for the sophomore cohort. Though it appears that second follow-up sophomore retrieval rates rose dramatically from the first follow-up, the comparison is misleading. First follow-up questionnaires received an on-site edit by Survey Representatives, and questionnaires with missing or incomplete information were returned to the respondents for completion. No on-site edit was possible during the second follow-up survey.

Interview validation requires that selected respondents be contacted a second time to assure the quality of information collected by field interviewers. For a description of validation procedures, see Section 5.2.3. During the second follow-up, field supervisors conducted validation

interviews with 10 percent of the respondents who had been interviewed on the telephone or in person. The data collected were then compared to questionnaire data. As in the first follow-up, no cases failed validation checks.

6. DATA PROCESSING

Data processing activities span the entire length of each of the HS&B surveys, beginning with pretest activities, continuing with maintenance of the respondent locator database, and concluding with machine editing and the preparation of public use data tapes. Data processing activities in the base year and in the first and second follow-ups will be discussed together.

6.1 Maintenance of Longitudinal Locator Data Bases

The locator data base maintains the most up-to-date name and address information available for each sample member as well as information from previous waves. During each wave, respondents have completed a separate locator page, which requested their name and address, their spouse's name, their parents' names and address(es), and the names, addresses, and relationships of two other people who are likely to stay informed of the respondent's whereabouts. The locator page also requested information regarding birth date, sex, and social security number. To assure confidentiality, all locating information is stored on secure files which are separate from the questionnaire data.

Since three surveys have been completed and since birth date and sex are also provided elsewhere in each questionnaire, several independent sources of locating and identifying information are generally available. This information is necessary for locating hard-to-find respondents, for verifying that a given ID number refers to the same individual across waves, and for constructing corroborated birthdate and sex composites (BIRTHMO, BIRTHDAY, BIRTHYR, SEX, and SEXCOMP).

6.2 Receipt Control Procedures

For all three waves, the NORC Automated Survey System (NASS) has been used to track survey activities. This system consists of a data file

for each school and/or cohort that contains the respondent ID number, disposition codes, and other information. During the base year, the school NASS file was used to generate weekly summary reports that tracked refusal rates and patterns, completed survey days or delays, and the receipt of school-level documents (i.e., school questionnaires). NASS also generated customized calendars of scheduled school survey days for each NORC Survey Representative.

Weekly summary reports on the receipt of sophomore and senior questionnaires were produced during the base year and both follow-ups. Data control disposition codes were added to the NASS files, making it possible to track the internal movement of instruments through mail receipt, editing, data retrieval, validation, and shipment for optical scanning. The respondent-level NASS (receipt control) files were linked with the longitudinal locator database to produce interviewer assignment logs, to trace nonrespondents as of a certain date, and to produce reminder postcards. As noted in Chapter 5, the NASS also generated the transmittal materials for shipping the prepared instruments to the optical scanning subcontractor.

At the end of each data collection period, a reconciliation between the files provided an accurate count of the number of survey participants and documents received. The reconciliation used three types of checks: check digits derived from a fixed mathematical formula that easily identified misread or miscopied student ID numbers, a comparison of the respondent's birth date, sex, and other identifying information against base year and first follow-up data, and a comparison of field transmittal forms against what the NASS records indicated had been returned from the field. All discrepancies were reported for review and resolution.

6.3 Optical Scanning

As discussed in earlier sections, the student questionnaires were optically scanned using equipment that read darkened ovals or marks on the page. NORC conducted extensive tests and checks of the machine's ability to read correctly the darkened ovals. An early test of 131 documents revealed that the mark sense threshold required adjustment. A second test of 90 documents was conducted, and a thorough audit of the results verified that satisfactory data conversion was being achieved.

In the base year, student instruments were limited to two versions (one per cohort) and the instruments contained only one logical branch or skip sequence for respondents to follow. Because of this simplicity, it was efficient for the optical scanning contractor to perform the critical item edit and convert blank fields to missing value codes at the time of completing the data conversion. The conversion of blanks to missing values was done according to instructions from NORC. The optical scanning contractor for all three waves has been National Computer Systems (NCS). (In the base year the company was called Westinghouse Learning Corporation, and during the the first follow-up, its name was changed to Westinghouse Information Services.)

For all three surveys, NCS created separate data files for the two cohorts. To check the accuracy of data conversion, NORC conducted an audit of a sample of cases, comparing the scanned and machine edited data files with the actual hard-copy questionnaires.

6.4 Machine Editing

In the base year, machine editing was limited to the examination of each data field for out-of-range values. Very few stray codes were discovered; appropriate missing value codes were assigned to these fields.

As noted in the section on optical scanning (6.3), base year questionnaires were designed so that only one explicit "skip" instruction appeared in the senior questionnaire (seniors not going on to college did not complete the last section on college education). There were no "skip" instructions in the sophomore questionnaire. Where two or more questions were related, the items following an implicit screening or filter question contained response options for those who were "screened" out by the filter question. No inter-item consistency checks were carried out on base year data files between the implicit filter questions and the related (dependent) items.

In the first and second follow-ups, several sections in the questionnaire required respondents to follow "skip" instructions. A case-by-case inspection of logical inconsistencies and stray codes was impractical due to the sheer number of cases and the fact that the pages of the questionnaires had been cut apart as preparation for data entry by optical scanning. Consequently, programs were written to automatically perform the inter-item machine edit checks. The tasks performed included: resolution of inconsistencies between filter and dependent questions, supplying the appropriate missing data code for questions left blank, detecting illegal codes and converting them to missing data codes, and generating a report on the quality of the data as measured by the incidence of correctly and incorrectly answered fields and correctly or incorrectly skipped fields.

Inconsistencies between filter and dependent questions were resolved in consultation with CS staff. In most instances, dependent questions that conflicted with the skip instructions of a filter question contained data that, although possibly valid, were not responsive to the intent of the dependent question. Data retrieval verified that when filter questions were

answered correctly, the dependent questions which should have been skipped were often answered simply because they seemed to apply. During the machine editing process, inappropriate responses were expunged by turning them into blanks.

After improperly answered questions were converted to blanks, the student data were passed to a program which supplied the appropriate missing-data codes for blank questions. The program converted questions left blank according to several criteria. If a previous question had been answered in a way that required that the current question be skipped, a "legitimate skip" code was supplied. If not, a "missing data" code was supplied, except in the case of critical questions. Critical questions with missing data were flagged during data preparation, and attempts were made to obtain the information by telephone. If the respondent specifically refused to answer a question during the call-back, a special scannable oval was marked. Critical questions marked in this way were assigned a special code of "refused." Otherwise, critical questions were treated in the same manner as others. Finally, additional missing value codes for multiple-coded questions were supplied by the scanner.

Detection of out-of-range codes was completed during scanning for all questions except those permitting an open-ended response. For the hand-coded, open-ended questions (such as the 3-digit occupation and industry codes, or the 6-digit college and field-of-study codes), the data were compared to the list of valid codes, and invalid codes were converted to the "no answer" value. The numbers of invalid codes detected were negligible.

For measuring data quality, the machine-edit programs produced bar graphs that displayed the frequencies for the different situations recognized by the programs: questions properly answered, questions properly

skipped (the "legitimate skip" code), questions skipped in error (the "no answer" code), and questions answered in error.

The treatment of inappropriately answered items (i.e., those a respondent was instructed to skip) relied on the results of the critical item editing procedure. With only one or two exceptions, screening or filter questions were designated as critical items. When respondents were inconsistent in answering these items, either by responding to items they were instructed to skip, or by failing to answer dependent questions related to the filter item, the case was classified as an edit failure. Telephone calls were used to obtain responses to items skipped in error. In addition, the results of these calls demonstrated unambiguously that inappropriate answers to filter-dependent items were universally caused by respondents' failure to comply properly with the routing instructions of the filter questions. Rather than skipping to the designated target question to resume their responses, these individuals attempted to answer each filter-dependent question that appeared to offer a reasonably suitable response category. On the strength of these findings, all filter-dependent responses entered in error were converted to the proper missing data values (i.e., the "legitimate skip" code).

6.5 Data File Preparation

In the base year, data for both cohorts were combined into a single dataset. To facilitate this, NORC reformatted the tape so that identical questions in both versions occupied the same tape positions in each file. In general, the data for both cohorts followed the order of the senior questionnaire. Items unique to the sophomore instrument were interspersed among the senior items so that sophomore data appeared in about the same

order as in the questionnaire. Also, whenever necessary, the sophomore response category values were recoded to match those for the senior cohort

Data for the first follow-up were merged with base year data and placed on two tapes, one for each cohort. After the second follow-up was completed, these data were merged with the base year and first follow-up files and also placed on two tapes.

A final task of each survey was the computation of composite variables. The base year composite variables were constructed to be compatible with those contained on the public use file for the National Longitudinal Study of the High School Class of 1972 (NLS-72). These composite variables and the ones created after the first and second follow-ups are discussed in Chapter 7.

7. GUIDE TO THE DATA FILES AND CODEBOOK

Since three waves of data are represented on the data tape, the analyst has the opportunity to use data from any single wave or to link data from one wave to another. In doing so, however, care must be taken to use the proper participation flags and weights so that conventional statistical packages function to produce accurate statistics. Therefore, we have included a set of suggestions that should be helpful to the analyst prior to describing the data files. This is followed by a complete description of the content and organization of the data files and a guide to the codebook.

In the section on the data files, the reader should pay particular attention to the classification variables, which have been specially constructed to streamline substantive analyses (see Section 7.2.10 and Appendix G). Since researchers often need to control for education level, family income, educational aspirations, SES, and so forth, CS and NORC have devoted considerable effort to constructing a set of classification variables which can be used for this purpose. The analyst thus has several important control variables at his or her disposal and has little need to undertake time-consuming and complicated variable construction.

7.1 Hints on Selecting Participation Flags and Weights

One of the first steps to take before running statistical analyses is to select the proper participation flags and weights. There are three participation flags, BYPART, FU1PART and FU2PART in tape positions (8), (9), and (4275), that indicate whether a respondent participated in the base year, first follow-up, and second follow-up surveys, respectively. These flags should be used to select the subset of respondents who participated in the wave(s) the analyst intends to examine. When used with the corresponding weights, appropriate population estimates can be produced.

The corresponding weights are BYWT for BYPART, FU1WT for FU1PART, and FU2WT for FU2PART. If data from all three waves are to be used, then all three participation flags should be selected jointly and used with PANELWT3. This procedure will result in the selection of respondents who participated in all three waves of the survey and the production of appropriately weighted estimates.

Even if the analyst is running unweighted statistics, the participation flags should be used.

To compute a weighted estimate of the proportion of students in the second follow-up sample who checked "Math is interesting to me" (Question 8AC) in the base year questionnaire, one would take the following steps: (1) use the base year participation flag, BYPART, to select the 14,825 cases in the second follow-up sample that participated in the base year; (2) invoke the appropriate weight, BYWT; and then (3) run frequencies for the variable BB008AC. Similarly, to compute a weighted estimate using data from the first follow-up questionnaire, one would (1) use the follow-up participation flag, FU1PART, to select the 14,102 cases that participated in the first follow-up; (2) invoke the appropriate weight, FU1WT; and then (3) compute the estimate for the desired variable.

The reason for stressing the use of participation flags and weights is to ensure that unweighted and weighted analyses are performed correctly by most computer packages. (See Appendix H for specific examples using SAS.) If cases are not first selected using the participation flag, some packaged programs may include in the analysis cases with no data, thus giving erroneous bases for frequencies, cross-tabulations, variances, and so forth. Therefore, the analyst should always select cases first using the appropriate participation flag, and then do the analysis.

When student and school questionnaire data are used together, it is particularly important to select cases using the student participation flag. If the participation flag is not used, students who did not participate in the survey may be included in the analysis simply because there is school data on their record.

Although weights are covered in detail in Chapter 3, a few words are warranted here. The second follow-up data files are designed to be used as weighted data sets in all kinds of analysis. The complex sample design of the three waves of the survey virtually ensures inaccurate results if the data are analyzed on an unweighted basis. Clustering, multi-stage selection, and disproportionate sampling all contribute potential bias and various degrees of unreliability, which can be avoided by using the weights provided to analyze specific subsets of the sample. The weights included on the file and data for which they are appropriate are displayed in Table 3.4-1.

7.1.1 Packaged Statistical Programs

CS has responded to numerous questions over the years having to do with statistical analyses of High School and Beyond data and now routinely recommends the procedures outlined in Appendix H, using SAS with HS&B data. Of course, SPSS and SPSS-X can also be used, and the data file contains the appropriate control cards for both packages. Users should be aware that SAS and SPSS-X are now interchangeable at many computer installations, and should contact their own facility to obtain the information necessary to create an SPSS-X file from SAS and vice versa.

7.2 Content and Organization of the Data Files

The second follow-up sophomore student data file consists of 14,825 records. Each record is organized as shown in the record layout that appears as Appendix D. The variables on the record are grouped into logical

sets as discussed below. For the sake of brevity, each item of data is referred to by its SPSS (SPSS-X, SAS) variable name as defined in the SPSS, SPSS-X, and SAS control cards provided with the data file.

The second follow-up sophomore cohort data tape contains the following files.

- 1) The raw data file, which contains the randomized ID number, first follow-up flags and composites, base year questionnaire data, first follow-up questionnaire data, dropout questionnaire data, transfer supplement data, early graduate data, first follow-up test data, selected school data, second follow-up data, and second follow-up weights, flags and composite variables
- 2) The record layout for the raw data file
- 3) SAS control cards
- 4) SPSS control cards for first follow-up flags and composites, base year questionnaire and test data; first follow-up questionnaire data; dropout questionnaire; transfer supplement; early graduate supplement; first follow-up tests and base year school data; second follow-up questionnaire data; and second follow-up flags, weights and composites.
- 5) SPSS-X control cards for the first follow-up flags, weights and composites; base year questionnaire; first follow-up questionnaire; dropout questionnaire; transfer supplement; early graduate supplement; first follow-up tests; the second follow-up questionnaire; and second follow-up flags, weights and composites.

Technical specifications on tape density, record length, and so forth, are provided separately with each tape.

7.2.1 Identification Codes

The first variable on the file, ID (in tape positions 1-6, that is, "columns" 1 through 6), is a unique but randomized six-digit student identification code. The second variable, SCHLID (1-4), is a unique but randomized school identification code composed of the first four digits of

the student ID. SCHLID allows a user to link students with the school in which they were sampled during the base year survey.

7.2.2 Participation and Status Codes

BYPART (8), FU1PART (9), and FU2PART (4275) indicate whether the student was a participant (code = 1) or nonparticipant (code = 0) during the base year survey, the first follow-up survey, and the second follow-up survey, respectively. These variables also indicate whether base year, first follow-up, and second follow-up questionnaire data, respectively, are available for a student. (See Section 7.1.)

The variable FUSTATUS (10) provides information about reasons for nonparticipation in the first follow-up. FUSTTYPE (11) is a student type indicator that applies to sophomores only; it takes the constant value "6" for all students on the senior data file.

7.2.3 Data Availability Flags

SOQFLAG (12), DRQFLAG (13), TRQFLAG (14), and EQQFLAG (15) indicate whether first follow-up in-school questionnaire data, dropout questionnaire data, transfer supplement or early graduate data are available for the respondent. PARFLAG (19) and BYSCHDAT (21) indicate whether parent questionnaire data and base year school questionnaire data, respectively, exist for a particular student. TWINFLAG (20) indicates whether the respondent was identified as a twin or triplet, and TRPART (4373) designates whether or not the student participated in the transcripts study.

7.2.4 School-Level Characteristics

These variables provide information about the student's school and were collected during the base year. SCHSAMP (23) classifies the school into one of nine sampling strata: (0) regular public, (1) alternative

public, (2) Cuban Hispanic public, (3) other Hispanic public, (4) (not used), (5) regular Catholic, (6) black Catholic, (7) Cuban Hispanic Catholic, (8) elite non-Catholic private, and (9) non-elite, non-Catholic private. SCHURB (24) classifies the student's school as (1) urban, (2) suburban, or (3) rural. SCHREGN (25) indicates in which of the nine U.S. Census divisions the school is located. (See also Appendix G.)

7.2.5 Sampling Weights and Replicate Codes

The weights included on the second follow-up data file include Base Year Weight (BYWT), First Follow-Up Weight (FU1WT), Second Follow-Up Weight (FU2WT), Panel Weight (PANELWT3), Test Weight (TESTWT2), Transcript Weight (TRWT2) and Raw Weight (RAWWT). (See Chapter 3 for a full description; also see Section 7.1.)

Tests of statistical significance on these data should be carried out on a weighted basis and should take account of the design effect due to the complex sample design and weighting scheme. Exact standard errors and design effects (DEFF factors) and root design effects (DEFT factors) for proportions estimated on 30 variables are provided in Section 3.2.3, which also contains guidelines on how to use these factors to calculate approximate standard errors that take into account the complex sample design.

The standard errors and design effects reported in Section 3.2.3 were calculated using the method of balanced repeated replication (BRR). Users who have access to a BRR program can calculate exact standard errors and design effects for variables not included in Section 3.2.3 using the replicate codes (REPCODE) included on the data file. These codes indicate the computing stratum (first 2 digits) and the half-sample (last digit,

coded 1 or 2) to which each student in the sample belongs. The BRR program used to calculate these sampling errors is available upon request from CS.

7.2.6 Base Year Student Questionnaire Data

The base year sophomore questionnaire data are reproduced on the second follow-up data tape just as they appeared on the base year data tape. However, data are included only for the 14,825 sophomores who were selected when a subsample was drawn prior to the second follow-up. Students selected for follow-up who did not participate in the base year survey will, of course, have no base year student questionnaire data. For ease of reference to the base year data file, the base year data in the second follow-up data file have been placed in tape positions 212 through 1,225, so that the tape position for any given base year variable is exactly 200 positions higher on the second follow-up file than on the base year file.

At the beginning of the student questionnaire data file (212 through 215) are four data indicators that show (1) whether data are available (code = 1) or not available (code = 0) on non-English language usage (LANGDATA); (2) whether the student chose to fill out the Spanish language version of the base year student questionnaire (SPANLANG); (3) whether base year test data are included on the file for this student (TESTDATA); and (4) the grade level (sophomore = 1, senior = 2) of the student during the base year (GRADE). Note that the language questions are not on the second follow-up tape but are on the Language File (see Appendix F).

Tape positions 233 through 831 on the sophomore file contain base year questionnaire data. Questions appear in the order of the base year sophomore questionnaire and use the SPSS variable names (mnemonics) established during the base year. Because the sophomore and senior base year questionnaires differ slightly from each other, gaps sometimes occur in

the sophomore and senior records. Gaps appear in the senior record where a sophomore question has no corresponding senior question. (Similarly, gaps occur in the sophomore record where a senior question has no corresponding sophomore question). These anomalies are necessary in order to attain the more important goal of placing variables in the same relative positions on both the senior and sophomore records.

Tape positions 838 through 857 contain five psychological composites constructed during the base year. (See Information for Users, Base Year (1980) Data, NORC, 1980, the base year user's manual, for a description of how these were constructed.) Tape positions 858 through 1,199 contain base year test score data.

7.2.7 First Follow-Up Student Questionnaire Data (1980 Sophomore Cohort)

The first follow-up student questionnaire and test score data are organized as follows: tape positions 1,226-1,798 contain data from the in-school sophomore cohort questionnaire; tape positions 1,800-2,477 contain data from the "not currently in school" (dropout) questionnaire; tape positions 2,479-2,516 contain data from the transfer student supplement; tape positions 2,518-2,925 contain data from the early graduate supplement; tape positions 2,927-3,052 contain first follow-up test score data. At the beginning of each section of questionnaire data is a flag (FYMETHOD, FDMETHOD, FTMETHOD, or FGMETHOD), which indicates the method of administration used for that questionnaire or supplement: in school (code = 0); group session outside of school (code = 1), in person (code = 2); by telephone (code = 3); or by mail (code = 4).

Many of the questions on the dropout questionnaire are identical to those on the in-school questionnaire. Where this is the case, these data have been copied from the dropout questionnaire tape position of a student's

record to the corresponding in-school questionnaire tape position on the student's record. These items are identified on the Record Layout for the in-school questionnaire by an asterisk (*) in front of the variable name and a cross-reference to the corresponding variable name and tape position on the dropout questionnaire. This is intended to facilitate analysis of those items that are common to the in-school and dropout questionnaires.

7.2.8 Selected Base Year and First Follow-Up School Data

Selected base year and first follow-up school questionnaire data are attached to the student record as contextual data about the school environment. These data are in tape positions 3,053 through 3,115 and include: number of students in the 10th and 12th grades; specialization of the school, if any; percent of the students and faculty who are black and Hispanic; percent of 1978-79 class now in regular college; percent of students who dropped out; participation in bilingual and other special programs such as Title I and Title VII; and legal ownership of the school.

7.2.9 Second Follow-Up Questionnaire Data (1980 Sophomore cohort)

In tape positions 3,116-4,273 are data items from the second follow-up questionnaire, arranged in the order in which the items appeared on the questionnaire. One exception is that 59A (spouse's industry) and 59B (spouse's occupation) were reversed on the data file to be consistent with data from earlier waves.

7.2.10 Composite Variables, First and Second Follow-Up Surveys

Several of the composite variables and 1 dices that were created for the first follow-up data files have been retained in their original form in positions 8-76 of the second follow-up data tape. Composite variables and

indices that were created for the second follow-up are found in positions 4,274-4,541.

Composite variables were constructed using responses from two or more questionnaire items. In some cases, composites were constructed from dozens of variables or from variables from different databases, such as from the Bureau of Labor Statistics. All of the composite variables are described in detail in Appendix G, where they are listed along with flags and weights in the order in which they appear on the tape. Most of the composite variables can be used as classification variables or independent variables in data analysis. For this reason, composite variables may be referred to as classification variables in this or other CS documents.

7.2.10.1 Demographic Variables

Many of the composite variables which were constructed were respondent demographic characteristics. SEX, SEXCOMP, RACE, and RACE2 are all examples. Since there were several sources of information on sex from the base year through the first follow-up, SEX was constructed to produce a variable with the least missing data and most agreement (respondents occasionally report this information inconsistently). SEXCOMP is simply a copy of the same variable within the second follow-up section. RACE and RACE2 also were constructed from several sources of information. Each one defines racial categories, especially Hispanics, a little differently.

Socioeconomic status can be determined from BYSES, BYSESQ, FUSES, FUSESQ, SES and SESQ. BYSES and FUSES were constructed from base year and first follow-up data respectively, using father's occupation, father's education, mother's education, family income, and material possessions in the household. BYSESQ and FUSESQ are simply the SES quartile to which the respondent belongs. SES is a copy of FUSES which has been placed in the

second follow-up section. If FUSES was missing, BYSES was used. SESQ is the quartile coding of SES.

Other demographic composite variables include high school region (HSREGION), urbanicity of the respondent's high school (HSURBAN), community type (COMTYPE), whether the respondent has children (CHILDFLG), the language spoken in the home (HOMEL'NG), family size (FAMSIZE), family income (FAMINC), the highest level of education reported by either of the respondent's parents (PAREDUC), and whether the respondent's parents owned or rented their home (HOMEOWN).

Eight variables which were obtained from the Labor Department can be used as local area economic indicators. The presence of these variables provides a rare opportunity for linking educational characteristics and outcomes to economic circumstances. The economic indicators include county unemployment rates for 1980, 1981, and 1982 (CUNEMR80, CUNEMR81, CUNEMR82) for the county in which the respondent attended high school. Also furnished is county per capita personal income (CPCPI80, CPCPI81), and the average hourly wage in manufacturing (MWAGE80, MWAGE81, and MWAGE82).

7.2.10.2 Educational Variables

BYTEST is the composite score covering the base year tests in vocabulary, reading, and mathematics, and BYTESTQ is the quartile distribution of BYTEST. FUTUREST is the composite score for the first follow-up tests which were identical to the base year tests. FUTURESTQ is the quartile coding of FUTUREST. For the convenience of the user, FUTUREST has been copied to the second follow-up section and is called TEST. If FUTUREST was missing, BYTEST was substituted. TESTQ is the quartile coding of TEST. Other indicators of achievement include high school grades (HSGRADES), high school grade point average (HSGPA), and high school diploma (HSDIPLOM).

HSTYPE shows the type of high school the respondent attended-- public, Catholic, and other private. HSPROG identifies whether the respondent participated in a general, academic, or vocational program.

Analysts can incorporate considerable information on coursework taken during high school. Several composite variables from the High School Transcript Survey have been placed on the second follow-up data file. HSENG2, HSMATH, HSSOC, HSPHYSCI, HSBIO, and HSFOR indicate the number of credits students obtained in academic subjects. Credits in business, trade, home economics, art, and personal awareness are shown by HSBUS, HSTRADE, HSHOMEC, HSARTS, and HSPER. HSOTHER indicates the number of high school credits in courses not otherwise classified. NEWBASE is the total credits in English, mathematics, physical science, biological science, social science, and foreign language. Finally, the amount and difficulty of coursework in mathematics, science, and vocational education is captured by MATHPATN, SCIPATN, and VCONPATN.

HANDICAP indicates whether the respondent has ever reported a handicap, participated in a program for the handicapped, or received handicap benefits. This variable was constructed from data reported in all three waves.

The follow-up surveys gathered a great deal of information on participation in postsecondary education, and much of it is summarized in the activity state variables for postsecondary education. These indicate for each respondent whether he or she was enrolled in some form of postsecondary education at various points after high school. For attenders, the variables identify whether the school was public or private, whether it was two-year or four-year, and whether the student was full-time or part-time. The activity state variables are called PSESOC82, PSESFE83, PSESOC83,

and PSESFE84. As the labels indicate, the variables point to each October and February, from October 1982 to February 1984.

Additional information was added to the data files from the HEGIS directory and the Directory of Postsecondary Schools with Occupational Programs. TUTION1, TUTION2, and TUTION3 indicate the amount of tuition charged by colleges and universities which respondents reported attending. For respondents attending vocational schools, VOCNTRL1, VOCNTRL2, and VOCNTRL3 indicate whether the school was public or private and two-year or four-year.

7.2.10.3 Psychological Scales

Five psychological scales were constructed from various attitude items included in the first follow-up questionnaires. These scales are intended to measure self-concept (FYCONCEPT), locus-of-control (FYLOCUS), work orientation (FYWORK), family orientation (FYFAMILY), and community orientation (FYCOMMUN). Each composite scale is the average of the standardized scores of the questionnaire items of which it is composed. For a list of the component items and the construction procedures, see Appendix G.

7.2.10.4 Employment Status

There are four activity state variables for employment status (JOBSOC82, JOBSFE83, JOBSOC83, and JOBSFE84). These variables indicate for each October and February, from October 1982 through February 1984, the employment status of the respondent. Each respondent is characterized as working full-time, working part-time, unemployed, or not in the labor force.

7.3 Guide to the Codebook

The codebook provides a comprehensive description of the student data file and is organized in the same way. It begins with a set of identification variables which are followed by base year, first follow-up, and second follow-up data. The last section contains second follow-up composite variables. For each variable on the tape the codebook provides the following information, referenced in Figure 7.3 by the number in parentheses following each item:

- a question number for cross-reference to the questionnaire (1)
- the tape position of the variable (2)
- the variable format (3)
- the SPSS (or SAS) variable name (4)
- the SPSS (or SAS) variable label (5)
- for questionnaire items, the exact question wording and original response categories (6 & 7)
- for composite variables, the constructed category values (7)
- data codes for all response categories (8)
- unweighted frequency counts (9)
- unweighted, unadjusted percentage frequencies (10)
- weighted "valid cases" percentage frequencies (11)
- reserved codes (12)

Explanations:

Question number (Item 1 in Figure 7.3): For variables taken directly from questionnaires, this is the question number in the original document. Composite variables and other items such as flags have been assigned question numbers that serve to indicate the type or source of the variable.

Tape position (Item 2 in Figure 7.3): This item gives the starting and ending tape position for each variable on the data tape.

Variable format (Item 3 in Figure 7.3): This item indicates the type of variable, its width, and the number of decimal points, if any.

SPSS (SAS) variable name (Item 4 in Figure 7.3): Each variable on the data tape is identified by a unique SPSS variable name. Data indicators

(such as flags and status codes) and composite variables are given mnemonics that help identify them, for example, SCHLID for "school identification code" and BYSES for "base year socioeconomic status composite." Student questionnaire items and school questionnaire items have names that begin with a two-character code that identifies the cohort and wave to which the item belongs, for example, FY25A. These codes and their meanings are as follows:

YB = younger (sophomore) cohort questionnaire, base year
EB = elder (senior) cohort questionnaire, base year
BB = both (senior and sophomore) cohort questionnaires,
base year
FY = first follow-up, younger cohort, student questionnaire
FD = first follow-up, younger cohort, dropout questionnaire
FT = first follow-up, younger cohort, transfer student
supplemental questionnaire
FG = first follow-up, younger cohort, early graduate
supplemental questionnaire
FE = first follow-up, elder cohort questionnaire
SB = school questionnaire, base year
SY = second follow-up, younger cohort questionnaire
SE = second follow-up, elder cohort questionnaire

For student or school questionnaire items, positions 3 through 8 of the variable name indicate the original question number and its subparts.

Two special variables begin with a four-character code: (1) postsecondary education activity state variables begin with PSES; (2) employment activity state variables begin with JOBS.

The user should be careful always to refer to the variable by its SPSS (SPSS-X, SAS) variable name in any computing procedures, rather than by its question number, which may be very similar to the variable name.

SPSS (SAS) variable label (Item 5 in Figure 7.3): A short variable label appears after the variable name. This label is the same as that which appears on the SPSS (SAS) data definition cards included on the tape.

Original question wording (Item 6 in Figure 7.3): For questionnaire items, this provides the exact question wording as it appeared in the original document.

Response categories (Item 7 in Figure 7.3): This item provides either the original response categories (in the case of questionnaire items) or the recoded or constructed response categories for composite variables and data indicators, such as flags. For display in the tables, continuous variables have been recoded to collapse all valid values into a single response category. This allows the codebook tables to show the frequency counts, unweighted percentages, and adjusted weighted percentages for continuous variables without printing each distinct value that the variable can take.

Response codes (Item 8 in Figure 7.3): This item provides the actual numerical codes that appear on the data tape in the tape position specified (except for continuous variables where the actual values that appear on the tape have been recoded to produce the frequency counts and percentages). Certain codes, discussed below, are reserved to indicate missing data, legitimate skip, and so forth.

Frequency counts (Item 9 in Figure 7.3): This item shows the unweighted frequency counts for all records that were processed, including records that have missing data codes, legitimate skips, and so forth. Note,

however, that the unweighted totals in the codebook vary: 14,825 cases for variables such as ID code and participation flags; 13,749 cases for base year variables; 11,813 cases for first follow-up variables when the dropouts, early graduates, and transfer students are not included; 14,102 first follow-up cases including the dropout, transfer, and early graduate questionnaires; and 14,825 cases for selected base year school questionnaire variables. These different bases reflect the fact that different subsets of the sampled students responded to different survey instruments.

Unweighted percentage frequencies (Item 10 in Figure 7.3): This column displays the frequency counts of Item 9 as percentages. All records that were processed are included.

Weighted "valid cases" percentage frequencies (Item 11 in Figure 7.3): This column displays the weighted frequency of those cases that are "valid," that is, excluding those records that have been assigned reserved codes.

Reserved codes (Item 12 in Figure 7.3): In this dataset certain codes termed "reserved codes" have been chosen always to stand for certain situations. These codes and their interpretations are:

- 6 = multiple punch more than one response where only one response was called for
- 7 = refusal respondent refused to answer an item, either at the time of questionnaire administration or telephone follow-up. This value is available only for questionnaire items designated as critical for analysis.
- 8 = missing data data that should be present for this respondent is missing, but respondent did not necessarily refuse to provide data

9 = legitimate skip either because of responses to preceding filter questions or because of other respondent characteristics, data for this item should not be present for this respondent; that is, the data are legitimately missing

These reserved codes correspond identically to those used in NLS-72 and in the two previous waves of the High School and Beyond study. The codes as listed above apply to variables with single-column data fields. For variables with fields greater than one column, the leftmost columns are filled with 9s (e.g., 96, 996, 9996).

In addition, there are three other missing value codes that apply to some variables:

93 = insufficient data for activity state variables only; no data are available to indicate either activity or inactivity for any part of the time period of the variable (PSE and job activity state variables are contained in Appendix G.)

4 = don't know the respondent did not neglect to respond to this question nor did he/she refuse to answer; instead, the respondent stated that the necessary information was not available

5 = uncodeable verbatim .. the written response was too unusual to be categorized OR the response was unintelligible or illegible

As with the other missing value codes, the field is 9-filled if it is more than one column wide.

The next questions ask about your parents or guardians. Please answer for those parents with whom you are now living. For example, if you have both a natural father and a stepfather, answer for the male who lives in the same household with you. If you are living with neither, use the category -- 'Do not live with father (stepfather or male guardian).'

Please answer for the same person in later questions that ask about your father or your mother.

WORK EXPERIENCE

In this section, we would like to find out about the jobs you have held, particularly in the period between leaving high school and February 1984. Include full-time jobs, part-time jobs, apprenticeships, on-the-job training, military service and so on.

We are interested in learning about the kinds of jobs you have held, the hours you worked and your income from these jobs, the level of your job satisfaction, and the relation of your training and education to your work experience. This information will help us better understand the movement of young people into the world of work and the reasons for changes in job situations.

Question 45

Tape Pos. 3750
Format: 11

SY45 = HELD ANY JOB BETW HS AND FEB 1984

Between the time you left high school and the end of February 1984, did you hold a full-time or part-time job of any kind? This includes PAID jobs, VOLUNTEER jobs, working WITHOUT PAY on a family farm or business or being in the MILITARY. (MARK ONE)

Next we would like information about all of the jobs you had between leaving high school and the end of February 1984. We would also like to know about the periods of time you were between jobs and looking for work.

IMPORTANT INSTRUCTIONS

There is room to discuss four jobs. At Q.46 enter the job you held after high school. You can start with a job held during high school only if you still held that job after high school. Answer parts A-L about that job. Enter your next job at Q.47 and so on.

IF YOU HAVE HAD MORE THAN 4 JOBS: Enter the first three jobs in Q.46 to 48 and then enter your most recent or current job in Q.49.

IF YOU HELD TWO JOBS AT THE SAME TIME: Enter both jobs but enter them on separate pages.

IF YOU HAVE BEEN IN THE MILITARY: Please consider your entire military experience as one job.

WARNING When using the above variable from the raw data file, and the pay period (see next variable) is Hourly (1), the user must divide the data by 100 when it is not BLANK and not a reserved code. Otherwise, the data will be inaccurate and any analysis will be very misleading. When using the SPSS code, SPSS-X code, SAS code, or the SAS system file provided on the NCES public release tape, DO NOT perform this calculation; it has already been provided.

1980 SOPHOMORE COHORT FIRST FOLLOW-UP QUESTIONNAIRE

Dear Participant:

Thank you for accepting our invitation to continue your participation in High School and Beyond. Through completion of this questionnaire, valuable information obtained from young people themselves can be used by policymakers to improve the education system for future students. Their goal is to prepare students for productive and meaningful roles in an increasingly complex and changing society.

THE NATIONAL CENTER FOR EDUCATION STATISTICS
by
THE NATIONAL OPINION RESEARCH CENTER

ED(NCES) Form No. 2409-50A Part I

The Federal Privacy Act of 1974 requires that each survey respondent be informed of the following:

- (1) This survey is authorized by law (20 USC 1221e-1). While you are not required to respond, your cooperation is needed to make the results of this survey comprehensive, accurate, and timely.**
- (2) You are subject to no penalty for not providing all or any part of the requested information.**
- (3) The purpose for which this information is to be used is to provide statistics on a national sample of students as they move out of the American high school system into the critical years of early adulthood and relate these statistics to postsecondary educational costs and financial aid and other factors on the educational, work, and career choices of young adults.**
- (4) The routine uses of these data will be statistical in nature as detailed in paragraph 9 of Appendix B of the Department Regulations (34 CFR 5b) published in the Federal Register, Vol. 45, No. 92, May 9, 1980.**

Prepared for
THE NATIONAL CENTER FOR EDUCATION STATISTICS
by
THE NATIONAL OPINION RESEARCH CENTER

The Federal Privacy Act of 1974 requires that each survey respondent be informed of the following:

- (1) This survey is authorized by law (20 USC 1221e-1). While you are not required to respond, your cooperation is needed to make the results of this survey comprehensive, accurate, and timely.**
- (2) You are subject to no penalty for not providing all or any part of the requested information.**
- (3) The purpose for which this information is to be used is to provide statistics on a national sample of students as they move out of the American high school system into the critical years of early adulthood and relate these statistics to postsecondary educational costs and financial aid and other factors on the educational, work, and career choices of young adults.**
- (4) The routine uses of these data will be statistical in nature as detailed in paragraph 9 of Appendix B of the Department Regulations (34 CFR 5b) published in the Federal Register, Vol. 45, No. 92, May 9, 1980.**

EARLY GRADUATE SUPPLEMENT TO FIRST FOLLOW-UP QUESTIONNAIRE

Dear Participant:

Thank you for accepting our invitation to continue your participation in High School and Beyond. Through completion of this questionnaire, valuable information obtained from young people themselves can be used by policymakers to improve the education system for future students. Their goal is to prepare students for productive and meaningful roles in an increasingly complex and changing society.

1980 SOPHOMORE COHORT SECOND FOLLOW-UP QUESTIONNAIRE

Dear Participant:

Thank you for accepting our invitation to continue your participation in High School and Beyond. Through completion of this questionnaire, valuable information obtained from young people themselves can be used by policymakers to improve the education system for future students. Their goal is to prepare students for productive and meaningful roles in an increasingly complex and changing society.

Prepared for
THE NATIONAL CENTER FOR EDUCATION STATISTICS
by
THE NATIONAL OPINION RESEARCH CENTER

ED(NCES) Form No. 2441-2

THE FEDERAL PRIVACY ACT OF 1974 REQUIRES THAT EACH SURVEY RESPONDENT BE INFORMED OF THE FOLLOWING:

- (1) THIS SURVEY IS AUTHORIZED BY LAW (20 USC 1221E-1). WHILE YOU ARE NOT REQUIRED TO RESPOND, YOUR COOPERATION IS NEEDED TO MAKE THE RESULTS OF THIS SURVEY COMPREHENSIVE, ACCURATE, AND TIMELY.**
- (2) YOU ARE SUBJECT TO NO PENALTY FOR NOT PROVIDING ALL OR ANY PART OF THE REQUESTED INFORMATION.**
- (3) THE PURPOSE FOR WHICH THIS INFORMATION IS TO BE USED IS TO PROVIDE STATISTICS ON A NATIONAL SAMPLE OF STUDENTS AS THEY MOVE OUT OF THE AMERICAN HIGH SCHOOL SYSTEM INTO THE CRITICAL YEARS OF EARLY ADULTHOOD AND RELATE THESE STATISTICS TO POSTSECONDARY EDUCATIONAL COSTS AND FINANCIAL AID AND OTHER FACTORS ON THE EDUCATIONAL, WORK, AND CAREER CHOICES OF YOUNG ADULTS.**
- (4) THE ROUTINE USES OF THESE DATA WILL BE STATISTICAL IN NATURE AS DETAILED IN PARAGRAPH 9 OF APPENDIX B OF THE DEPARTMENT REGULATIONS (34 CFR 5B) PUBLISHED IN THE FEDERAL REGISTER, VOL.45, NO. 92, MAY 9, 1980.**

BEFORE YOU START ... READ THIS!

FILLING OUT THIS QUESTIONNAIRE IS AS EASY AS 1 - 2 - 3!

INSTRUCTIONS ARE INCLUDED WITH EACH QUESTION. BELOW ARE EXAMPLES OF THE DIFFERENT KINDS OF INSTRUCTIONS YOU WILL SEE, AND THE CORRECT WAY TO ANSWER EACH KIND OF QUESTION.

EXAMPLE A: (MARK ONE)

WHAT IS THE COLOR OF YOUR EYES? (MARK ONE)

- ☐ BROWN ☐ GREEN
☐ BLUE ☐ ANOTHER COLOR

IF THE COLOR OF YOUR EYES IS GREEN, YOU WOULD MARK THE OVAL TO THE LEFT OF "GREEN."

EXAMPLE B: (MARK ALL THAT APPLY)

LAST WEEK, DID YOU DO ANY OF THE FOLLOWING? (MARK ALL THAT APPLY)

- ☐ SEE A PLAY
☐ GO TO A MOVIE
☐ ATTEND A SPORTING EVENT

IF YOU WENT TO A MOVIE AND ATTENDED A SPORTING EVENT LAST WEEK, YOU WOULD MARK THE TWO OVALS AS SHOWN.

EXAMPLE C: (MARK ALL THAT APPLY FOR EACH LINE)

WHICH OF THE FOLLOWING ACTIVITIES DO YOU USUALLY DO ON A DAILY BASIS?

- | | DAY
(MORNING & AFTERNOON) | | NIGHT |
|--|----------------------------------|-----------------------|----------------------------------|
| A. ATTEND CLASSES | <input checked="" type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| B. STUDY | <input type="radio"/> | <input type="radio"/> | <input checked="" type="radio"/> |
| C. WORK FOR PAY | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| D. EXERCISE OR COMPETE IN SPORTS | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| E. WATCH T.V. | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| F. VISIT WITH FRIENDS | <input type="radio"/> | <input type="radio"/> | <input checked="" type="radio"/> |

IF YOU USUALLY ATTEND CLASS, WORK FOR PAY, AND EXERCISE OR COMPETE IN SPORTS DURING THE DAY, STUDY AND VISIT WITH FRIENDS AT NIGHT, YOU WOULD MARK THE OVALS AS SHOWN.

EXAMPLE D: (MARK ONE OVAL FOR EACH LINE)

DO YOU PLAN TO DO ANY OF THE FOLLOWING NEXT WEEK?

- | | YES | NOT
SURE | NO |
|---------------------------|----------------------------------|----------------------------------|----------------------------------|
| A. VISIT A RELATIVE | <input type="radio"/> | <input type="radio"/> | <input checked="" type="radio"/> |
| B. GO TO A MUSEUM | <input type="radio"/> | <input checked="" type="radio"/> | <input type="radio"/> |
| C. GO TO A LIBRARY | <input checked="" type="radio"/> | <input type="radio"/> | <input type="radio"/> |

IF YOU DON'T PLAN TO VISIT A RELATIVE NEXT WEEK, MAY GO TO A MUSEUM, AND ARE DEFINITELY GOING TO THE LIBRARY, YOU WOULD MARK THE OVALS AS SHOWN.

EXAMPLE E:

WHAT IS YOUR FAVORITE SPORT? (MARK ONE)

- ☐ FOOTBALL ☐ BASKETBALL
☐ BASEBALL ☒ OTHER (WRITE IN) ICE HOCKEY

IF YOUR FAVORITE SPORT IS ICE HOCKEY, YOU WOULD ENTER "ICE HOCKEY" ON THE LINE AS SHOWN AND MARK THE OVAL.

EXAMPLE F: (WRITE IN AMOUNT AND MARK APPROPRIATE OVALS)

2	0
3	0
4	0
5	0
6	0
7	0
8	0
9	0
1	0
2	0

IF YOU WORK 20 HOURS PER WEEK, YOU WOULD WRITE "2" IN THE FIRST BOX, "0" IN THE SECOND BOX, AND FILL IN THE CORRESPONDING OVALS BESIDE EACH NUMBER.

-OR-

FILL IN THE CORRESPONDING OVALS BESIDE EACH NUMBER.

OR

WORK EXPERIENCE

In this section, we would like to find out about the jobs you have held, particularly in the period between leaving high school and February 1984. Include full-time jobs, part-time jobs, apprenticeships, on-the-job training, military service and so on.

We are interested in learning about the kinds of jobs you have held, the hours you worked and your income from these jobs, the level of your job satisfaction, and the relation of your training and education to your work experience. This information will help us better understand the movement of young people into the world of work and the reasons for changes in job situations.

45. Between the time you left high school and the end of February 1984, did you hold a full-time or part-time job of any kind? This includes PAID jobs, VOLUNTEER jobs, working WITHOUT PAY on a family farm or business or being in the MILITARY. (MARK ONE)

☐ Yes (CONTINUE TO INSTRUCTIONS ON BOTTOM OF THIS PAGE)

☐ No (SKIP TO Q.53)

Next we would like information about all of the jobs you had between leaving high school and the end of February 1984. We would also like to know about periods of time you were between jobs and looking for work.

IMPORTANT INSTRUCTIONS

There is room to discuss four jobs. At Q.46 enter the job you held after high school. You can start with a job held during high school only if you still held that job after high school. Answer parts A-L about that job. Enter your next job at Q.47 and so on.

IF YOU HAVE HAD MORE THAN 4 JOBS: Enter the first three jobs in Qs.46 to 48 and then enter your most recent or current job in Q.49.

IF YOU HELD TWO JOBS AT THE SAME TIME: Enter both jobs but enter them on separate pages.

IF YOU HAVE BEEN IN THE MILITARY: Please consider your entire military experience as one job.

²This code is used to identify not reported occupations in surveys where the not reported cases are not allocated.

³Those returns from the Population Census which do not have an occupation entry are allocated among the major occupation groups during computer processing. These cases are labeled with the code for the "allocation" category to which they are assigned. (See text, page VI).

INDUSTRIAL CLASSIFICATION SYSTEM

Equivalent alphabetic codes follow some codes. Either code may be utilized, depending upon the processing method. Numbers in parentheses following the industry categories are the SIC definitions. "N.e.c." means "not elsewhere classified."

APPENDIX F: OTHER DATA FILES AVAILABLE FROM NCES

Other High School and Beyond Data Files Available from NCES

BASE YEAR FILES

Language File

The Language File contains information on each student who reported some non-English language experience either during childhood or at the time of the survey. This file contains 11,303 records (sophomores and seniors combined), with 42 variables for each student.

Parent File

The Parent File contains questionnaire responses from the parents of about 3,600 sophomores and 3,600 seniors who are on the Student File. Each record on the Parent File contains a total of 307 variables. Data on this file include parents' aspirations and plans for their childrens postsecondary education.

Twin and Sibling File

The Twin and Sibling File contains base year responses from sampled twins and triplets; augmented data on twins and triplets of sample members; and data from siblings in the sample. This file (2,718 records) includes all of the variables that are on the HS&B student file, plus two additional variables (family ID and SETTYPE--type of twin or sibling).

Teachers' Comments File

The Sophomore Teacher File contains responses from 14,103 teachers on 18,291 students from 616 schools. The Senior Teacher File contains responses from 13,683 teachers on 17,056 students from 611 schools. At each grade level, teachers had the opportunity to answer questions about HS&B-sampled students who had been in their classes. The typical student in the sample was rated by an average of four different teachers. Preliminary analyses by NCES indicate that the files contain approximately 76,000 teacher observations of sophomores and about 67,000 teacher observations of seniors.

Friends' File

The Friends' File contains identification numbers of students in the HS&B sample who were named as friends of other HS&B-sampled students. Each record contains the ID of sampled students and IDs of up to three friends. Linkages among friends can be used to investigate the sociometry of friendship structures, including reciprocity of choices among students in the sample, and for tracing friendship networks.

MERGED BASE YEAR AND FIRST FOLLOW-UP FILES

Sophomore File

The First Follow-Up Sophomore File contains responses from 29,737 students and includes both base year and first follow-up data. This file includes information on school, family, work experiences, educational and occupational aspirations; personal values, and test scores of sample participants. Students are also classified as to high school status as of 1982 (i.e., dropouts, same school, transfer, or early graduate).

Senior File

The First Follow-Up Senior File contains responses from 11,995 individuals and includes both base year and first follow-up data. This file includes information from respondents concerning their high school and postsecondary experiences and their work experiences.

OTHER FILES

Transcript File

This file describes the coursetaking behavior of 15,941 sophomores of 1980 throughout their four years of high school. Data include a six-digit course number* for each course taken, along with course credit, course grade, and year taken. Other items of information, such as grade point average, days absent, and standardized test scores, are also contained on the file.

Offerings and Enrollments File

This file contains school information, and course offerings and enrollments data, for 957 schools. Each course offered by a school is identified by a six-digit course number.* Other information, such as credit offered by the school, is also contained on each record.

Updated School File

This file contains base year data (966 completed questionnaires) and first follow-up data (956 completed questionnaires) from the 1,015 participating schools in the HS&B sample. First follow-up data were requested only from those schools that were still in existence in spring 1982 and had members of the 1980 sophomore cohort currently enrolled. Each high school is represented by a single record that includes 230 data elements from the base year school questionnaire, if available, along with other information from sampling files (e.g., stratum codes, case weights).

*Corresponds with descriptions in A Classification of Secondary School Courses (CSSC), developed by Evaluation Technologies, Inc., under contract with NCES, July 1982.

HIGH SCHOOL AND BEYOND COMPOSITE VARIABLES, FLAGS, AND WEIGHTS SOPHOMORE COHORT, BASE YEAR THROUGH SECOND FOLLOW-UP SURVEYS

Composite variables, flags, and weights are defined below. Numbers in parentheses refer to tape position. See Chapter 3 for a detailed discussion of weights and Chapter 7 for a brief discussion of flags and composite variables.

*   PLEASE NOTE THREE VARIABLES IN THE FIRST
*   PART OF THE FILE ARE REPEATED IN THE END OF
*   THE FILE UNDER DIFFERENT LABELS. THIS WAS
*   DONE FOR VARIABLES THAT WERE THE SAME BETWEEN
*   THE FIRST AND SECOND FOLLOW-UPS. FUSTTYPE
*   (11) = FISTUTYP (4352); SCHURB (24) = HSURBAN
*   (4358); SEX (30) = SEXCOMP (4333). THESE
*   VARIABLES HAVE BEEN INCLUDED IN BOTH PLACES
*   FOR THE CONVENIENCE OF THE USER.
*
*   ALSO NOTE THAT RACE (31) IS NOT THE SAME
*   AS RACE2 (4334-4335).

SEX (30): At the time this variable was constructed, students' sex was available in three survey documents: the base year questionnaire, the base year Student Identification Pages, and the first follow-up questionnaire. If one or more of these sources contained a valid sex code (and if the non-missing sources did not conflict), that code was taken for the composite sex variable (SEX).

In 857 cases (among both cohorts) either no valid sex code or contradictory sex codes were found. When the information was missing, the value of the composite sex variable was assigned by inspection of the students' first names. In the small number of cases with inconsistent codes, a thorough review of the documentation for the case was carried out until the conflict was resolved.

Second follow-up survey data (questionnaire and locator pages) confirmed that SEX was a highly accurate composite. For the convenience of the user, a copy of SEX (named SFXCOMP) has been placed among the second follow-up composite variables, in position 4333. See below.

RACE (31): This variable was based on race and ethnic origin codes which were available from both the base year and first follow-up Questionnaires. (See base year questions 90 and 91 and first follow-up questions 101 and 102). Composite race/ethnicity codes (RACE) were assigned according to a hierarchical sequence as follows: (1) if a Hispanic ethnic

origin (codes 01-04) was indicated either year, the student was coded as Hispanic; otherwise (2) if an American Indian race code, code 3, was present either year, the student was coded as American Indian; otherwise (3) if an Asian race code, code 4, was present either year, the student was coded as Asian; otherwise (4) if a race code of "Black," code 1, was present either year, the student was coded as Black; otherwise (5) if a race code of "White," code 2, was present either year, the student was coded as White.

All remaining students (685 in both cohorts combined) were assigned to the residual category, "Other." This category therefore includes students whose race was coded as "Other" or was missing in both questionnaires and who did not give a Hispanic ethnic origin either year.

BYTEST (32-36): The base year test composite is an average of the non-missing reading, vocabulary, and math (Part 1) standardized scores (YBREADSD, YBVOCBSD, YBMTH1SD). If all three are missing, the composite score is missing.

BYTESTQ (37): Indicates whether the student's BYTEST score falls in the lowest, second, third, or highest quartile of the distribution for the population (weighted by BYTESTWT, which was on the base year data file). Quartile cutpoints were 42.50, 49.59, and 56.91.

BYSES (38-42): The base year socioeconomic status composite was copied from the base year public use file. The procedures used to construct BYSES adhered as closely as possible to those used in NLS-72, in order to retain comparability. The composite is based on five components: (1) father's occupation, (2) father's education, (3) mother's education, (4) family income, and (5) material possessions in the household, and is the simple average of the non-missing components after each component score has been standardized.

BYSESQ (43): Indicates the quartile of the population distribution in which the student's composite SES score falls. After the first follow-up, BYSESQ was recomputed using a revised procedure. The new procedure calculated quartile cutting points for the weighted population of SES scores (using BYWT) rather than establishing quartile cutting points on the assumption of a normal distribution of scores, as was done in the base year. Cutting points are -.56, -.09, and +.45.

FUTEST (44-48): Is an average of the first follow-up non-missing reading, vocabulary, and math (Part 1 only) standardized scores (FYREADSD, FYVOCBSD, and FYMTH1SD). If all three scores are missing, the composite score is missing.

FUTESTQ (49): Indicates the quartile in which the respondent's score falls. Quartile cutpoints, which were determined on the basis of a weighted distribution using FUTESTWT, are 42.50, 49.59, and 56.91.

FUSSES (50-54): The follow-up socioeconomic status composite was constructed using first follow-up data and the same procedures employed in the base year. That is, the variable is based on five components: (1) father's occupation, (2) father's education, (3) mother's education, (4) family income, and (5) material possessions in the household, and is the simple average of the non-missing components after each component score has been standardized.

FUSESQ (55): The quartile in which the respondent's SES score falls. Quartile cutting points were calculated using FUWT. Cutting points are -.54, -.07, and +.49.

FYCONCPT, FYLOCUS, FYWORK, FYFAMILY, FYCOMMUN (56-59, 60-63, 64-67, 68-71, and 72-75, respectively): The same five psychological scales were provided in the first follow-up as in the base year. For sophomores, these scales, and their components, are:

Self-concept: FY75A, C, D, H (sophomore in-school)
FD77A, C, D, H (sophomore dropout)

Locus-of-control: FY75B, E, F, G (sophomore in-school)
FD77B, E, F, G (sophomore dropout)

Work orientation: FY73A, C, E (sophomore in-school)
FD82A, C, E (sophomore dropout)

Family orientation: FY73B, H, I (sophomore in-school)
FD82B, H, I (sophomore dropout)
(Note that component 'I' is given negative weight.)

Community orientation: FY73F, G, J (sophomore in-school)
FD82F, G, J (sophomore drop out)

For all of these composites, each component is standardized separately (using the appropriate weight), and the non-missing components are averaged. Students missing all the components of any scale are assigned the missing value (8) for that scale.

METHOD (4274): This variable indicates whether a respondent completed the second follow-up questionnaire without assistance (1), was interviewed by telephone (2), or was interviewed in person (3). Nonrespondents received a code of 8.

FU2PART (4275): This is the second follow-up participation flag. 0 = Nonparticipant; 1 = Participant.

FU2STAT (4276): This variable provides the final disposition of the case during the second follow-up. 1 = Participant, 2 = Unavailable, 3 = Unlocatable, 4 = Refused/Broke off, 5 = Deceased, and 6 = Mentally Handicapped.

BYWT (4277-4284): Base Year Weight is the follow-up raw weight adjusted for nonresponse during the base year. This weight should be used with base year questionnaire data (i.e., select only cases with **BYPART = 1**; this is equivalent to selecting if **BYWT NE 0**).

FU1WT (4285-4292): Weight applied to first follow-up questionnaire data (select cases with **FU1PART = 1**; this is equivalent to selecting if **FU1WT NE 0**).

FU2WT (4293-4300): Weight applied to second follow-up questionnaire data (select cases with **FU2PART = 1**; this is equivalent to selecting if **FU2WT NE 0**).

PANELWT3 (4301-4308): Weight applied to cases with data from the base year, first follow-up, and second follow-up. This weight is appropriate for analyses that use items from all three waves (select cases for which **BYPART = 1** and **FU1PART = 1** and **FU2PART = 1**; this is equivalent to selecting if **PANELWT3 NE 0**).

TESTWT2 (4309-4316): Weight applied to cases with second follow-up data and base year and first follow-up test data. Since there were several tests administered, and since some respondents did not take all of the tests, we have chosen a conservative definition of a test "participant". Even if a respondent has some test data, he/she is only considered a test participant if there was enough test data for constructing a meaningful composite score. Those who have insufficient test data or no test data were given a value of zero for **TESTWT2**.

RAWWT (4317-4324): Weight applied to cases that were selected into the follow-up subsample. This weight is unadjusted for non response.

TRWT2 (4325-4332): Weight applied to cases who participated in the second follow-up and for whom transcript data exist in the High School and Beyond Transcript Survey (1982).

SEXCOMP (4333): This variable is identical to **SEX** (see above). In most cases it reflects the valid sex code indicated by the respondent on the base year questionnaire, base year Student Identification Page, and/or the first follow-up questionnaire. For 857 cases, where there was missing or conflicting data, a review of names and other information was made to determine sex. 1 = Male, 2 = Female.

RACE2 (4334-4335): This race/ethnicity composite is the same as **RACE** (position 31) except it provides further subdivision of participants who declared they were Hispanic and it reclassifies some Hispanics under first follow-up criteria as non-Hispanic. This variable was constructed from the first follow-up variables **RACE** (composite

race), FY101 (race), and FY102 (origin or descent); and the base year variables BB089 (race) and BB090 (origin or descent). FY101 and FY102 include values for FD53 and FD52 for dropouts. Respondents were classified according to a preference hierarchy, from the code 1.1 to the code of 6. This means that the algorithm that created this composite first checked to see if the conditions were met for code 1.1; if these conditions were not met, then the algorithm tested for the conditions for code 1.2, and so on. Respondents were classified as follows:

Mexican (1.1): RACE = 1 and, for FY102 and BB090, either a) both are equal to 1, or b) one is missing and the other = 1.

Cuban (1.2): RACE = 1 and, for FY102 and BB090, either a) both are equal to 2, or b) one is missing and the other = 2.

Puerto Rican (1.3): RACE = 1 and, for FY102 and BB090, either a) both are equal to 3, or b) one is missing and the other = 3.

Other Hispanic (1.4): RACE = 1 and, for FY102 and BB090, either a) one is missing and the other = 4, or b) they disagree but are both in the range of 1-4 (Hispanic), or c) one is in the range of 1-4 (Hispanic) and the other is in the range of 5-31 (non-Hispanic) and no other race information is available from FY101 and BB089. If the first follow-up race variable (FY101) and the base year race variable (BB089) disagree, and one indicates non-Hispanic, then the respondent is classified as non-Hispanic (RACE 2-6, 1.4, or 6) according to the preference hierarchy: Native American, Asian, Black, White, Hispanic Other, Other. This hierarchy is based on BB090 and FY102. Thus if Native American was ever mentioned, the respondent is assigned to that category. If there is no mention of Native American but Asian is mentioned, the Asian category is chosen, and so on down the hierarchy.

Native American (2): RACE = 2; or if RACE = 1 and FY102 or BB090 is in the range of 5-31, Native American is assigned using the reclassification hierarchy described above.

Asian/Pacific (3): RACE = 3; or if RACE = 1 and FY102 or BB090 is in the range 5-31, Asian/Pacific is assigned using the reclassification hierarchy.

Black (4): RACE = 4; or if RACE = 1 and FY102 or BB090 is in the range 5-31, Black is assigned according to the reclassification hierarchy.

White (5): RACE = 5; or if RACE = 1 and FY102 or BB090 is in the range 5-31, White is assigned according to the reclassification hierarchy.

Other (6): RACE = 6; or if RACE = 1 and FY102 or BB090 is in the range 5-31, Other is assigned according to the reclassification hierarchy.

BIRTHMO (4336-4337): Composite month of birth reflects agreements found among five independent sources of birthdate.

BIRTHDAY (4338-4339): Composite day of birth reflects agreements found among five independent sources of birthdate.

BIRTHYR (4340-4341): Composite year of birth reflects agreements found among five independent sources of birthdate.

TEST (4342-4346): This variable was copied from the first follow-up file (FUTEST). It is an average of the non-missing scores among FYREADSD, FYVOCBSD, and FYMTH1SD. If FUTEST was missing, BYTEST was copied.

TESTQ (4347): Indicates the quartile within which TEST falls. Cutpoints were determined on the basis of the weighted distribution of scores using KAWWT, the second follow-up selection weight. Cutpoints were 42.57, 49.61, and 57.5.

HSGRADES (4348-4349): Taken from GPA on the transcript study. If missing on the transcripts, average grades reported by the student in the first follow-up (FY7) were used. If this was missing, average grades from the base year (BB007) were used. 1 = Mostly A's or 90-100, 2 = Half A's and B's or 85-89, 3 = Mostly B's or 80-84, 4 = Half B's and C's or 75-79, 5 = Mostly C's or 70-74, 6 = Half C's and D's or 65-69, 7 = Mostly D's or 60-64, 8 = Below D or Less than 60.

HSPROG (4350): This variable was created from FY2 (high school program at the time of the first follow-up), FD9 (program at the time the student dropped out of school) and BB002 (high school program indicated during the base year). A preference hierarchy was invoked, so that academic was assigned if the student ever reported an academic program. If there was no report of academic but a vocational program was mentioned, vocational was assigned. Finally, if general was reported, general was assigned. When all three sources were missing, the variable was declared missing. 1 = General, 2 = Academic, 3 = Vocational.

HSHOMEWK (4351): Based on first follow-up (FY15) and base year data (BB015), this variable indicates the average time spent on homework per week reported by the respondent while in high school. For dropouts, only BB015 was available. Values were assigned as follows:

Less than one hour (1): Both FY15 and BB015 are less than three, or one is less than three and the other missing.

One to five hours (2): Either FY15 or BB015 = 4-5, or one is 1-3 and other is 6-7.

More than five hours (3): Both FY15 and BB015 = 6-7, or one is 6-7 and other missing.

F1STUTYP (4352): Copied from the first follow-up variable FUSTTYPE, this variable indicates student type at the time of the first follow-up. The possible types are 'in school,' 'dropout,' 'transfer,' or 'early graduate'.

HSDIPLOM (4353): High School Diploma/GED was constructed from second follow-up variable SY12 (did respondent complete high school), transcript study variables RESNLEFT (reason left high school) and TRSTTYPE (transcript student type), and FUSTTYPE (FUI student type). Transcript data were used for only 419 cases where transcript information differed from student-reported information. Values were assigned as follows:

Have Diploma or GED -- Never Left High School (1):

a) FUSTTYPE not equal to 2 (respondent was not a dropout) and SY12 or RESNLEFT = 1 (respondent graduated); or b) TRSTTYPE greater than 6 (transcript showed graduation)

Have Diploma or GED -- Returned For It (2):

a) FUSTTYPE = 2 (student was dropout) or TRSTTYPE is less than 6 (respondent dropped out and/or received a GED) and SY12 or RESNLEFT = 1; or b) SY12 = 4 (did not graduate but since earned GED); or c) TRSTTYPE is 4 or 5 (dropout earned GED or diploma)

No Diploma -- But Returned to School by February 1984

(3): a) SY12 = 2 (did not graduate but working toward GED/diploma; or b) SY12 = 3 and TRSTTYPE = 3 (did not graduate and transcript showed attendance gap)

No Diploma -- No Return (4): a) SY12 = 3, or b)

FUSTTYPE = 2, or c) TRSTTYPE = 2 (student was dropout and by first or second follow-up did not indicate returning to school)

No Data Available (8): All remaining cases

PSEPLANS (4354): First follow-up variable FY80, the amount of schooling the respondent expected to receive, was recoded from nine categories to five. (1) = none; (2) = vocational-technical; (3) = less than four year degree; (4) = college degree; (5) = advanced degree. If FY80 was missing, base year BB065 was substituted. FY80 includes values for FD40 for dropouts.

HSTYPE (4355): This variable is a recode of SCHSAMP, the respondent's original high school sample type. Regular sample, alternative public, Cuban

Hispanic public, and other Hispanic public were collapsed into public (1). Regular Catholic, Black Catholic, and Cuban Hispanic Catholic were combined into Catholic (2). Elite private and other private were classified as private (3).

HSREGION (4356-4357): To facilitate recoding of census regions, SCHREGN was recoded using decimals. (1.1) = New England--Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut; (1.2) = Middle Atlantic--New York, New Jersey, Pennsylvania; (2.1) = East North Central--Ohio, Indiana, Illinois, Michigan, Wisconsin; (2.2) = West North Central--Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, Kansas; (3.1) = South Atlantic--Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida; (3.2) = East South Central--Kentucky, Tennessee, Alabama, Mississippi; (3.3) = West South Central--Arkansas, Louisiana, Oklahoma, Texas; (4.1) = Mountain--Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah; (4.2) = Pacific--Washington, Oregon, California, Alaska, Hawaii. The use of decimals permits the user to employ the simple SAS "fuzz" statement to recode nine regions to four.

HSURBAN (4358): This variable is the same as SCHURB (24) and classifies the respondent's high school according to the CIC urbanization code. (1) = urban; (2) = suburban; (3) = rural.

COMTYPE (4359): This variable indicates the degree of urbanization of the community in which the respondent most recently resided. COMTYPE takes on the value of the most recent non-missing variable. SY6 was used first. If missing, COMTYPE was coded from FY100; otherwise it is based on the base year variable SCHURB. Note that FY100 has values from FD4 for dropouts.

HANDICAP (4360): This composite indicates whether the respondent ever indicated having a handicap, participation in a program for the handicapped, or receipt of Division of Vocational Rehabilitation benefits. Respondents were classified according to the following hierarchy: Handicapped Program, Consistent Handicap, Inconsistent Handicap, and No Handicap.

Handicapped Program (1): a) BB011H = 2, or FY9H = 2 (have participated in a program for the educationally handicapped), or BB011I = 2, or FY9I = 2 (have participated in a program for the physically handicapped); or b) SY26AK1 or SY26AK2 = 1 (have received Division of Vocational Rehabilitation Benefits).

Consistent Handicap (2): Respondent did not report participation in a handicapped program but reported a handicap in BOTH the base year and the first follow-up (the respondent need not report the same kind of handicap in both waves). Base year variables were BB088, BB087A, BB087C-BB087G; first follow-up variables were FY104, FY103A-FY103G.

Inconsistent Handicap (3): Respondent did not report participation in a handicapped program, and gave inconsistent reports of having a handicap. He/she indicated a handicap in one wave but not the other, or a handicap in one wave and no response in the other.

Not Handicapped (4): Respondent never reported having a handicap and never reported participation in a program for the handicapped. (This does not include respondents who gave no answer to any of the questions regarding specific handicaps or limiting physical conditions.)

Missing (8): All fields missing.

CHILDFLG (4361): Dichotomous variable which indicates whether the respondent has ever reported having children, based on the variables BB036I, BB081B, FD3I, FD64, FY52I, FY97B, SY4I, SY65, SY65A. If the respondent did not answer any questions about children, this variable was given a value of 8 ("missing"). Otherwise, if the respondent ever answered 'yes' to at least one of the variables, CHILDFLG is given the value of 1 ("have children"). If the respondent never answered 'yes', CHILDFLG is coded 0 ("no children").

HOMELANG (4362): Describes the home language background, based on variables LB14 (language usually spoken in the home) and LB15 (other language spoken in the home) from the base year Language File. The Language File contains only those respondents who mentioned a non-English language in questions 11 through 15 of the base year Student Identification Pages. The variable LANGDATA (tape position 212) indicates whether or not a respondent has language data available and is correct for second follow-up sophomores. Respondents were classified as follows:

Non-English, Monolingual (1): LB14 is in the range 2-11 (a single non-English language is usually spoken in the home) and LB15 = 1 ("no other language" is spoken).

Non-English Dominant, Multilingual (2): LB14 is in the range 2-11 and LB15 is in the range 2-96 (another language or combination of languages is also spoken or there was a multiple punch).

Unknown Dominant, Multilingual (3): LB14 is in the range 12-96 ("language usually spoken" is reported as being a combination of languages), OR LB14 is missing and LB15 is in the range 20-96 (more than one other language spoken).

English Dominant, Multilingual (4): LB14 = 1 (English is usually spoken) and LB15 is in the range 3-96 (one or more non-English languages are also spoken).

English, Monolingual (5): LB14 = 1 and LB15 = 1 or 2 ("no other language" or "English", respectively).

Assumed English, Monolingual (6): BYPART = 1 and LANGDATA NE 1 (i.e., the respondent participated in the base year but is not in the Language File) OR LB14 = 1 and LB15 is missing.

Missing (8): BYPART=0 or the respondent is in the Language File but both LB14 and LB15 are missing, or the respondent is in the Language File and LB14 is in the range 2-11 (respondent reports that a single non-English language is usually spoken) but LB15 is missing, or the respondent is in the Language File and LB15 is in the range 1-12 but LB14 is missing.

SES (4363-4367): Copied from FUSES, first follow-up socioeconomic composite variable. If missing, BYSES was used.

SESQ (4368): Quartile coding of SES. Quartiles were determined by the weighted distribution of SES scores using RAWWT, weight applied to cases selected into the second follow-up subsample. Cutting points are -0.59, -0.12, +0.45.

PAREduc (4369-4370): Parent's highest educational level reported in the base year and first follow-up takes the highest value among the variables BB039 (father's educational level--base year), BB042 (mother's educational level--base year), FY55 (father's educational level--first follow-up), and FY56 (mother's educational level--first follow-up). FY55 and FY56 contain values for FD50 and FD51. 1 = Don't Know, 2 = Less than High School, 3 = High School Graduate, 4 = Less than 2 Years Vocational/Etc., 5 = 2 or More Years Vocational/Etc., 6 = Less than 2 Years College, 7 = 2 or more Years College, 8 = College Degree (4 or 5 Years), 9 = Master's Degree, 10 = PhD/MD/Advanced Degree, 98 = Missing (all variables missing).

FAMSIZE (4371-4372): Family Size is based on check lists provided in the first follow-up and base year questionnaires of people living with the respondent and on the number of siblings reported by the respondent. First follow-up variables were used if available. If all fields were missing, then base year variables were used. The first follow-up variables were FY52A-FY52K and FD3A-FD3K; base year variables were BB036A-BB036K and BB096A-BB096E. As a conservative measure, each category was counted as 1 person even though some categories may represent several people (e.g., if the respondent reported living with "other relatives", this response was counted as 1 person).

FAMSIZE is the total of all categories living with the respondent, plus one for the respondent, plus the number of siblings if the respondent indicated that he lived with relatives (not including guardians or spouse). For example, if the respondent lived with a spouse, the 'number of siblings' would not be added to FAMSIZE unless the respondent indicated that relatives (e.g., father, siblings, etc.) also lived with him. However, if a respondent lived with grandparents, a parent, "my children," siblings, or

"other relatives," then the number of siblings would be added to the total, whether or not 'I live with siblings' had been checked.

If 'I live with siblings' is checked, FAMSIZE is increased by at least one, even if the 'number of siblings' indicates 'none' or missing. Conversely, if any relatives live with the respondent, then the number of siblings (if any) is added to FAMSIZE whether or not 'I live with siblings' is answered 'Yes.' FAMSIZE = 1 ('lives alone') if a) the respondent checked 'lives alone' and did not check living with any others, or b) respondent answered 'no' to any of the checklist questions listed above. FAMSIZE = 98 ('missing') only when all of the above variables are missing.

TRPART (4373): Indicates whether transcript data are available from the 1982 High School and Beyond Transcript Survey.

FAMINC (4374-4375): Family income reported in the base year parent questionnaire. If not available, income is taken from the base year student questionnaire (BB101).

FLAGINC (4376): Indicates how discrepant reported family income is from estimated family income. FLAGINC = 1 when the composite income interval does not overlap with a one-standard deviation interval about estimated income. Estimated income was determined by regressing the log of parent reported income, Y, on student reported income, X, expressed in dummy form. When FLAGINC = 1, it is assumed that composite income is somewhat unreliable because it does not overlap with the estimated income interval. When FLAGINC = 0, there is overlap between estimated and composite income, and composite income is considered more reliable.

HOMEOWN (4377): Indicates, based on the parent questionnaire completed during the base year, whether the student's family rented or owned their home. If not available from the parent file, student item BB102 was used. 0 = Renter; 1 = Homeowner.

HSQPA (4378-4380): Grade point average was computed from courses, credits, and grades shown on the high school transcript obtained as part of the 1982 High School and Beyond Transcript Survey. HSQPA is based on a 4-point scale.

HSENG2 (4381-4384), HSMATH (4385-4388), HSSOC (4389-4392), HSPHYSCI (4393-4396), HSBIO (4397-4400), HGFOR (4401-4404): High school course credits in English, mathematics, social science, physical science, life sciences, and foreign languages, respectively. A course credit is a Carnegie unit or a course that meets daily for one school year. Variables were obtained from the 1982 High School and Beyond Transcript Survey.

HSBUS (4405-4408), HSTRADE (4409-4412), HSHOME (4413-4416): High school course credits in business, grade-industry, and home economics. A

course credit is a Carnegie unit or a course that meets daily for one school year. Variables were obtained from the 1982 High School and Beyond Transcript Survey.

HSARTS (4417-4420): High school course credits in the arts. A course credit is a Carnegie unit or a course that meets daily for one school year. The variable was obtained from the 1982 High School and Beyond Transcript Survey.

HSPER (4421-4424): High school course credits in personal awareness. A course credit is a Carnegie unit or a course that meets daily for one school year. The variable was obtained from the 1982 High School and Beyond Transcript Survey.

HSOTHER (4425-4428): High school course credits in courses not otherwise classified. A course credit is a Carnegie unit or a course that meets daily for one school year. This variable was obtained from the 1982 High School and Beyond Transcript Survey.

NEWBASE (4429-4433): Sum of six high school credit areas known as the new basics--English, mathematics, physical science, biological science, social science, and foreign language. This variable was obtained from the High School Transcript file. The new basics represent coursework recommended by the National Commission on Excellence in Education minus computer science.

NEWBASEQ (4434): Quartile coding of sum of courses in the new basics. Quartiles were calculated using TRWT2, and the cutpoints are 799, 1048, and 1340.

HSCRED (4435-4439): Total course credits earned during high school. A course credit is a Carnegie unit or a course that meets daily for one school year. This variable was obtained from the High School Transcript file.

VOCLOG (4440-4444), READLOG (4445-4449), MATHLOG (4450-4454), SCIOLOG (4455-4459), WRITLOG (4460-4464): Log gain scores based on Item Response Theory methods of scoring for vocabulary, reading, mathematics, science, and writing tests taken during the base year and repeated in the first follow-up survey. Variables were obtained from Study of Excellence in High School Education: Educational Policies, School Quality, and Student Outcomes--Psychometric Analysis (conducted by Education Testing Service for NCES, USOE Contract No. 300-83-0247).

VOCLOGQ (4465), READLOGQ (4466), MATHLOGQ (4467), SCIOLOGQ (4468), WRITLOGQ (4469): Quartile ranks of IRT gain scores in vocabulary, reading, mathematics, science, and writing.

MATHPATN (4470): Pattern of mathematics coursework taken in high school. Concentrator = earned 4 or more credits in mathematics, at least one of which is from such advanced courses as analytic geometry, pure mathematics, solid geometry, analysis, calculus, mathematics 3, or statistics and probability. Four Year College Bound = earned 4 or more credits in mathematics, one of which was earned in algebra 1, 2, or 3; geometry; plane or solid geometry; trigonometry; or mathematics 1 or 2. General Math = earned 1-2 credits in math with less than 2 in the college preparatory courses. Limited or Nonparticipant = earned less than one credit in math. This variable was obtained from the High School Transcript file.

SCIPATN (4471): Pattern of science coursework taken during high school. Concentrator = earned one or more credits in each of the following: biology, chemistry, and physics in addition to any credits earned in general science courses. Four Year College Bound = earned one or more credits in an advanced physical science or an advanced life science in addition to any credits earned in general life or physical sciences. General Science = earned one or more credits in general life science or general physical science and less than one credit in advanced science offerings. Limited or Nonparticipant = earned less than one credit in science. This variable was obtained from the High School Transcript file.

VCONPATN (4472): Pattern of vocational coursework taken during high school. Concentrator = earned four or more credits in a single vocational education program, or earned four or more credits each in multiple instructional programs (e.g., business, marketing, etc.). Limited Concentrator = earned four or more credits in vocational education but less than four in a single instructional program. Sampler = earned from a fraction of a credit to four credits in vocational education. Nonparticipant = earned no credits in vocational education. This variable was obtained from the High School Transcript file.

CUNEMR80 (4473-4475), CUNEMR81 (4476-4478), CUNEMR82 (4479-4481): These variables are the county unemployment rates for 1980, 1981, and 1982, for the county where the sample member's high school was located. Unemployment rates were obtained from a supplementary file, Local Economic Indicators for HS&B Schools, and were added to the second follow-up tapes. The Local Economic Indicators file was created from data obtained from the Bureau of Economic Analysis, the Bureau of Labor Statistics, and the Census, and is available from NCES

CPCPI80 (4482-4486), CPCPI81 (4487-4491): These variables are the County Per Capita Personal Income in 1980 and 1981 for the county in which the sample member's high school was located. Data were obtained from a supplementary file, Local Economic Indicators for HS&B Schools, and were added to the second follow-up tapes. The Local Economic Indicators File was created from data obtained from the Bureau of Economic Analysis, the Bureau of Labor Statistics, and the Census, and is available from NCES.

MFLAGW (4492): Indicates whether the source of wage data in MWAGE80--MWAGE82 was county, SMSA, or state level.

MWAGE80 (4493-4496), MWAGE81 (4497-4500), MWAGE82 (4501-4504): Average hourly wage in manufacturing in 1980, 1981, and 1982, respectively of the county, state or SMSA in which the sample member's high school was located. Data were obtained from a supplementary file, Local Economic Indicators of HS&B Schools, and were added to the second follow-up tapes. The Local Economic Indicators File was created from Analysis, the Bureau of Labor Statistics, and the Census, and is available from NCES.

PSESOC82 (4505-4506), PSESFE83 (4507-4508), PSESOC83 (4509-4510), PSESFE84 (4511-4512): Activity state pointers for PSE Status in October 1982 through February 1984.

The second follow-up variables used were: SY18A, SY18B, SY18CM, SY18CY, SY18DM, SY18DY, SY18F; SY19A, SY19B, SY19CM, SY19CY, SY19DM, SY19DY, SY19F; SY20A, SY20B, SY20CM, SY20CY, SY20DM, SY20DY, SY20F;

School type and school control were also obtained from the HEGIS directories of the years in which the student reported attending the school. Directory information was used first. If directory information was missing, student-reported information was used.

The first step in generating the PSE Status activity state pointers was to check for conflicting start and leave dates. For a particular school, if the start date was found to be later than the leave date, both of these endpoint dates were set to missing.

Also, for a handful of cases, a particular endpoint (i.e., a start date or leave date for a particular school) was found to have a year specified but the month was missing. For these few cases, the month was assumed to be September, since this would place the endpoint in between the two pointers (February and October) for that particular year.

Next, all PSE activity state pointers were initialized at a value of 99, non-student status.

Tests were then performed for each pointer date to determine if the date fell between the start and leave dates for a school or if the date fell after the start date when "STILL ATTENDING THIS SCHOOL" is marked. If the student attended a private four-year school at the pointer date, the pointer was set to 1; if a public four-year school, it was set to 2; if a public two-year school, 3; if a private two-year or other school, 4. If the student indicated that he was attending full time, the pointer was incremented by 4.

When either a start or leave date was missing in such a way as to make the respondent's PSE Status uncertain at the time of the activity state pointer, then the pointer was given a value of 98 (missing).

A special missing data problem is presented by the fact that the "3rd" school in the survey is actually the most recent or current school if the respondent attended more than 3 schools. For this reason, if an activity

state pointer date fell between the leave date for school 2 and the start date for school 3, there is no way to know whether the respondent was in school at that time, since the gap in time between the two schools may be due to a period of not attending a school or it may simply be due to a lack of space in the questionnaire. For these cases, the activity state pointer was assigned a value of 93 (insufficient data).

JOBSOC82, JOBSFE83, JOBSOC83, JOBSFE84 (4513-4514, 4515-4516, 4517-4518, and 4519-4520, respectively): Activity state pointers for Employment Status in October 1982, February 1983, October 1983, and February 1984, respectively.

The second follow-up variables used for the construction of JOBSOC82, JOBSFE83, JOBSOC83, and JOBSFE84 were SY47EM, SY47EY, SY47F, SY47FM, SY47FY, SY47I; SY48EM, SY48EY, SY48F, SY48FM, SY48FY, SY48I; SY49EM, SY49EY, SY49F, SY49FM, SY49FY, SY49I; SY50EM, SY50EY, SY50F, SY50FM, SY50FY, SY50I; SY56A82E, SY56A83B, SY56A83J, SY56A84B.

The first step in generating the Employment Status activity state pointers was to check for conflicting start and leave dates. For a particular job, if the start date was found to be later than the leave date, both of these endpoint dates were set to missing.

Also, for a handful of cases, a particular endpoint (i.e., a start date or leave date for a particular job) was found to have a year specified but the month was missing. For these few cases, the month was assumed to be September, since this would place the endpoint in between the two pointers (February and October) for that particular year.

Next, a pointer was initially set to 3 (unemployed) if the respondent reported being without a job AND looking for work AND not a full-time student during the time interval represented by the pointer. Similarly, if the respondent reported that he/she was without a job AND NOT looking for work, or if the respondent reported being a full-time student in some time interval, then all pointers found in that time interval were initially set to 4 (not in the labor force). Later, these initial values were overridden if the start and leave dates for one of the jobs reported by the respondent was found to include the point in time that the activity state pointer represents.

Next, tests were performed for each pointer date to determine if the date fell between the start and leave dates for a job or if the date fell after the start date when "STILL HAVE THIS JOB" is marked. If the respondent held at least one full-time (35 hours per week or more) job on the pointer date, the pointer was set to 1 (employed full-time); if the respondent held a job or jobs on the pointer date, but did not work at least 35 hours per week at any single job, then the pointer was set to 2 (employed part-time), even if the total hours per week for all jobs together amounted to 35 hours or more. (The rationale for this decision is that a single full-time job is qualitatively different from a combination of part-time jobs, since the former is more likely to provide employee benefits and is often more permanent than a combination of part-time jobs.)

When either a start or leave date is missing in such a way as to make the respondent's employment status uncertain at the time of the activity state pointer, then the pointer was given a value of 98 (missing).

A special missing data problem is presented by the fact that "4th" job in the survey was the most recent or current job if the respondent held more than 4 jobs. For this reason, if an activity state pointer date fell between the leave date for job 3 and the start date for job 4, there is no way to know whether the respondent was employed at that time, since the gap in time between the two jobs may be due either to a period of non-employment or to lack of space in the questionnaire. For these cases, the activity state pointer was assigned a value of 93 (insufficient data).

TUITION1, TUITION2, TUITION3 (4521-4525, 4526-4530, 4531-4535, respectively): Tuition at First, Second, and Third Postsecondary Institutions, respectively. Tuition for each school reported by the respondent was obtained from the appropriate HEGIS directory of FICE codes. Depending on the dates of attendance, the 1981-82, and 1983-84 directories were used. For institutions with in-state and out-of-state tuitions, the choice was made according to the following rules. In-state was assigned (a) when the parents and student lived in the same state as the school; and (b) when the parents lived in a different state from the school, the student lived in the same state, and the student was independent (according to GSL criteria). Out-of-state tuition was assigned when (a) both parents and student lived in a different state from the school; (b) when the parents lived in a different state, the student lived in the same state, and the student was dependent on the parents (according to GSL criteria). First follow-up locating information was used to determine residency. If unavailable, base year data were used. If locating information was insufficient to determine residency, tuition was declared "missing". Tuition is coded "legitimate skip" for respondents who attended a vocational school, which would not be listed in the HEGIS directory.

VOCNTRL1, VOCNTRL2, VOCNTRL3 (4536-4537, 4538-4539, 4540-4541, respectively): Type of control at first, second, and third postsecondary vocational institutions, indicated on the second follow-up survey. This information was obtained from codes contained in the NCES Directory of Post-Secondary Schools with Occupational Programs (1981-82). If the school was not listed in the directory, Vocational Control was imputed from questions 18, 19, and 20 A and B. For each of these variables, the values are (0) nonparticipant; (11) public 2-year; (12) public 4-year; (21) private 2-year; (22) private 4-year; (98) missing; (99) legitimate skip. Note that the user can obtain collapsed categories for public-private and two-year-four-year by selecting the appropriate column. Legitimate skip was coded for respondents who had tuition data and therefore attended an academic college or university. Missing was assigned if the school was not listed in the directory, and there was insufficient information in the questionnaire to determine Vocational Control.

APPENDIX H: GUIDELINES FOR USING SAS WITH HS&B DATA

APPENDIX H

GUIDELINES FOR USING SAS WITH HS&B DATA

THE FILES PROVIDED ON THE PUBLIC RELEASE TAPE INCLUDE SAS CONTROL CARDS, A SAS SYSTEM FILE, AND A DOCUMENTATION FILE (WHICH ACCOMPANIES THE SAS SYSTEM FILE).

THE SAS SYSTEM FILE INCLUDES:

- (1) FIRST FOLLOW-UP FLAGS AND COMPOSITES
- (2) BASE YEAR QUESTIONNAIRE DATA
- (3) BASE YEAR TEST DATA (SEE NOTE BELOW)
- (4) FIRST FOLLOW-UP MAIN QUESTIONNAIRE DATA
- (5) FIRST FOLLOW-UP DROPOUT QUESTIONNAIRE DATA
- (6) FIRST FOLLOW-UP TRANSFER SUPPLEMENT DATA
- (7) FIRST FOLLOW-UP EARLY GRADUATE SUPPLEMENT DATA
- (8) FIRST FOLLOW-UP TEST SCORES (SEE NOTE BELOW)
- (9) SELECTED BASE YEAR SCHOOL DATA
- (10) SECOND FOLLOW-UP QUESTIONNAIRE DATA
- (11) SECOND FOLLOW-UP FLAGS, COMPOSITES, AND WEIGHTS

NOTE: TEST COMPOSITES THAT WERE CONSTRUCTED AT THE TIME OF OF THE FIRST FOLLOW-UP ARE GROUPED WITH THE FIRST FOLLOW-UP FLAGS AND COMPOSITES; TEST COMPOSITES CONSTRUCTED AT THE TIME OF THE SECOND FOLLOW-UP ARE GROUPED WITH THE SECOND FOLLOW-UP FLAGS, WEIGHTS, AND COMPOSITES.

THE SAS CONTROL CARDS PROVIDED ON THE FINAL DATA TAPES ARE THE SAME ONES THAT WERE USED TO CREATE THE SAS SYSTEM FILE ON THE FINAL DATA TAPES.

*** WARNING ***** PLEASE NOTE ***** WARNING ****

N.C.E.S. AND N.O.R.C. STRONGLY SUGGEST THAT ALL SAS USERS BE AWARE OF THE FOLLOWING POTENTIAL PROBLEM AREAS WHEN USING HS&B DATA FILES VIA SAS:

1) THERE ARE BLANKS IN THE RAW DATA FILE FOR A VARIETY OF REASONS, SUCH AS WHERE QUESTIONS WERE ASKED OF THE SENIORS ONLY. SEE THE USER'S MANUAL FOR MORE INFORMATION ABOUT THIS. ALSO, SEE POINT NUMBER 7) OF THIS DOCUMENT FOR A WARNING ABOUT BLANKS DUE TO NONPARTICIPATION.

2) SAS USERS SHOULD USE THE '(KEEP=...)' AND '(DROP=...)' OPTIONS IN THE 'SET...;' STATEMENT AND/OR IN THE 'DATA...;' STATEMENT WHEN CREATING WORKING DATA FILES SO THAT UNWANTED VARIABLES ARE NOT INCLUDED IN THE FILES. IT IS FASTER (BUT NOT ESSENTIAL) FOR VARIABLES IN THE '(KEEP=...)' STATEMENT TO BE LISTED IN THE SAME ORDER AS THEY OCCUR IN THE MAIN SYSTEM FILE. REMEMBER ALSO THAT THE '(KEEP=...)' OPTION DOES NOT REORDER THE VARIABLES IN THE NEW DATASET. TO REORDER VARIABLES, USE THE 'RETAIN ...;' STATEMENT BETWEEN THE 'DATA...;' STATEMENT AND THE 'SET...;' STATEMENT.

FOR EXAMPLE, IF ONLY THE BASE YEAR QUESTIONNAIRE DATA ARE NEEDED FOR THE PERMANENT FILE CALLED "OUT01.BYQSOPH" AND ONLY A FEW SECOND FOLLOW-UP FLAGS AND COMPOSITES ARE REQUIRED FOR THE WORK FILE CALLED "HIGHSCHL", THE FOLLOWING USE OF THE '(KEEP=...)' AND '(DROP=...)' OPTIONS WILL CAUSE ONLY THOSE VARIABLES TO BE AVAILABLE:

```
DATA OUT01.BYQSOPH (KEEP=ID YB003--BBMATHSD)
  HIGHSCHL          (DROP=YB003--BBMATHSD);
```

```
RETAIN HSTYPE PSEPLANS HSHOMEWK HSPROG HSGPA HSDIPLOM;
```

```
SET IN01.FU2SO (KEEP=ID YB003--BBMATHSD SEX RACE2 HSPROG
  HSHOMEWK HSDIPLOM PSEPLANS HSTYPE HSGPA);
```

REMEMBER THAT THE VARIABLES THAT ARE KEPT IN THE NEW FILES WILL ORDINARILY APPEAR IN THE SAME ORDER IN WHICH THEY OCCUR IN THE MAIN SYSTEM FILE "IN01.FU2SO", REGARDLESS OF THE ORDER OF THE LIST IN THE '(KEEP=...)' OR '(DROP=...)' OPTIONS. IN THIS EXAMPLE, THE 'RETAIN...;' STATEMENT IS USED FOR REORDERING SOME OF THE VARIABLES. SINCE THE VARIABLES "SEX" AND "RACE2" DO NOT APPEAR IN THE RETAIN STATEMENT, THEY WILL BE KEPT LAST IN THE NEWLY-ORDERED FILE CALLED "HIGHSCHL".

3) YOU MAY HAVE TO DELETE AT LEAST ONE THIRD OF THE LABEL CARDS GIVEN IN THE SAS CONTROL CARDS BECAUSE OF SAS SYSTEM LIMITATIONS AT MANY COMPUTER INSTALLATIONS. VARIABLE LABELS ARE AS SHORT AS POSSIBLE IN THE CARDS AND IN THE SYSTEM FILE, SO THAT MORE OF THE LABELS CAN BE USED SIMULTANEOUSLY.

4) THE LARGE NUMBER OF "VALUE" CARDS IN THE PROC FORMAT SECTION OF THE SAS CONTROL CARDS AND THE DOCUMENTATION FILE REQUIRES THAT A SPECIAL DD STATEMENT BE PLACED JUST AFTER THE // EXEC SAS CARD TO INCREASE THE CAPACITY OF THE FORMAT LIBRARY DURING A SAS RUN:

```
//LIBRARY DD SPACE=(TRK,(25,25,60))
```

IF THIS CANNOT BE DONE ON THE COMPUTER YOU ARE USING, IT MAY BE NECESSARY TO DELETE SOME VALUES.

5) WHEN WORKING WITH LARGE FILES, IT MAY BE NECESSARY TO OVERRIDE THE DEFAULT WORK SPACE WITH THE FOLLOWING DD CARD:

```
//WORK DD UNIT=SYSCR,SPACE=(TRK,(1000,1000))
```

PLACE THE //WORK DD CARD JUST AFTER THE // EXEC SAS CARD, (OR AFTER THE //LIBRARY DD CARD, IF THAT IS INCLUDED AS WELL).

6) THE FORMATS GIVEN IN THE PROC FORMAT STEP (IN THE SAS CONTROL CARDS AND IN THE DOCUMENTATION FILE) ARE NOT PERMANENTLY ASSOCIATED WITH EACH VARIABLE. WHENEVER THEY ARE NEEDED FOR A PROCEDURE, IT IS NECESSARY TO INCLUDE THEM IN THIS 'PROC FORMAT' STEP BEFORE THE PROCEDURE THAT WILL USE THEM, AS SHOWN IN THE FOLLOWING EXAMPLE (KEEP IN MIND THAT JOB CONTROL LANGUAGE IS DIFFERENT FOR DIFFERENT INSTALLATIONS):

```
//FREQS JOB NEOBGS1,HSB,TIME=2,REGION=1280K
// EXEC SAS,OPTIONS='NOGRAPHICS',REGION=1280K
//LIBRARY DD SPACE=(TRK,(25,25,60))
//WORK DD UNIT=SYSCR,SPACE=(TRK,(1000,1000))
//IN01 DD DSN=NEO.FU2SO.MAINPUB.SAS,
//      UNIT=SYSDA,
//      DISP=SHR
//SYSIN DD *
```

PROC FORMAT;

```
VALUE YESNOV 1='YES'
              2='NO';
```

```
.
```

```
.
```

```
.
```

```
VALUE SY13V 1='LESS THN HS GRAD'
             2='HS GRAD ONLY'
             3='LT 2YRS VOC-TRAD'
             4='2 YRS+ VOC-TRAD'
             5='LT 2 YRS COLLEGE'
             6='2+ YRS COLLEGE'
             7='FINISH COLLEGE'
             8='MASTER'S DEGREE'
             9='PHD,MD,OTHR PROF'
             10='DON'T KNOW';
```

PROC FREQ DATA=IN01.FU2SO;

```
FORMAT SY3A YESNOV.
       SY13 SY13V.;
```

TABLES SY3A*SY13;

TITLE EMPLOYMENT BY EDUCATION EXPECTATIONS;

WHEN USERS ARE CREATING THEIR OWN FORMATS THEY SHOULD KEEP IN MIND THAT A FORMAT FOR A CHARACTER VARIABLE MUST HAVE A FORMAT NAME BEGINNING WITH '\$', AND THAT FORMAT NAMES MUST NOT END IN A DIGIT (THIS IS WHY THE FORMAT FOR THE VARIABLE "RACE2" IS "VRACE2X").

7) SAS CREATES MISSING VALUES FOR VARIABLES THAT ARE NOT CODED (VALUES FOR VARIABLES ON THE RAW DATA FILE THAT ARE LEFT 'BLANK'). ON THE HS&B FILES, RESPONSES WERE LEFT BLANK FOR NONPARTICIPANTS. THIS COULD CREATE PROBLEMS FOR THE SAS USER WHEN VARIABLES ARE RECODED USING THE 'IF THEN' AND 'ELSE' STATEMENTS. THE FOLLOWING EXAMPLE ILLUSTRATES THIS POINT.

BB057L - IMPORTNC-HAVING LEISURE TIME (FROM THE BASE YEAR SECTION)

RESPONSE	CODES	FREQUENCY
NOT VERY IMPORTANT	1	318
SOMEWHAT IMPORTANT	2	3700
VERY IMPORTANT	3	9154
MULTIPLE PUNCH	6	4
MISSING DATA	8	573
TOTAL		13749

IN REALITY, THERE ARE 14,825 CASES ON THE SOPHOMORE FILE EVEN THOUGH THIS FREQUENCY TABLE SHOWS 13,749 (THE FREQUENCY WAS RUN ON BASE YEAR PARTICIPANTS ONLY, BY SELECTING WITH THE FLAG "BYPART"). 1,076 CASES WERE NONRESPONDENTS IN THE BASE YEAR AND THUS WOULD APPEAR AS BLANKS ON THE RAW DATA FILE AND AS MISSING ('.') ON THE SAS SYSTEM FILE FOR ALL BASE YEAR QUESTIONS. IF THE RE-SEARCHER USED THE FOLLOWING SAS STATEMENTS, A POSSIBLE ERROR IN ANALYSES COULD RESULT.

```
IF BB057L EQ 1 THEN LEIS_IMP=0;      * ("NOT IMPORTANT");
ELSE IF BB057L GT 3 THEN LEIS_IMP=.; * ("MISSING");
ELSE LEIS_IMP=i;                     * ("IMPORTANT");
```

THE VARIABLE LEIS_IMP WOULD, AS THE SAS STATEMENTS ABOVE SUGGEST, BE CODED 0, 1, AND MISSING, BUT THERE WOULD BE 1,076 EXTRA 1'S BECAUSE THE SAS-DEFINED MISSING WOULD BE INCLUDED IN THE LAST LINE. THIS PROBLEM COULD HAVE BEEN ALLEVIATED BY USING THE PARTICIPATION FLAGS WHEN DEFINING THE WORKING DATA FILES.

8) ANOTHER PROBLEM WITH SAS MISSING VALUES ARISES WHEN "LESS THAN" (I.E., LT OR <) AND "LESS THAN OR EQUAL" (I.E., LE OR <=) ARE USED. SAS CONSIDERS MISSING VALUES TO BE LESS THAN ZERO. THEREFORE, "LESS THAN" STATEMENTS MAY INCLUDE MISSING VALUES UNINTENTIONALLY, AS SHOWN IN THE FOLLOWING EXAMPLE:

BB058A - POSITIVE ATTITUDE TOWARD MYSELF (FROM THE BASE YEAR)

RESPONSE	CODES	FREQUENCY
AGREE STRONGLY	1	3680
AGREE	2	7092
DISAGREE	3	944
DISAGREE STRONGLY	4	138
NO OPINION	5	1253
MULTIPLE PUNCH	6	9
MISSING DATA	8	633
TOTAL		13749

```

IF BB058A <= 2 THEN SELFIMAG=1;          * ("POSITIVE");
ELSE IF (3 <= BB058A <= 4) THEN SELFIMAG=2; * ("NEGATIVE");
ELSE SELFIMAG=.;                          * ("MISSING");

```

THE 1,076 BASE YEAR NONPARTICIPANTS WILL RECEIVE A VALUE OF '1' FOR THE VARIABLE "SELFIMAG", BECAUSE THE SAS-DEFINED MISSING VALUES ARE CONSIDERED BY SAS TO BE LESS THAN 2.

9) IT IS WISE TO SORT ALL DATA FILES BY ID (STUDENT ID) BEFORE MERGING HS&B DATA FILES. ON SOME HS&B FILES, THE STUDENT ID VARIABLE IS NOT NAMED 'ID' AND THUS SHOULD BE CHANGED USING ID=STUDNTID BEFORE SORTING AND THEN MERGING.

FOR VERY LARGE FILES, THE USER MAY ENCOUNTER PROBLEMS WHEN SORTING. VARIOUS OPTIONS MAY BE ADDED TO THE // EXEC SAS CARD TO CIRCUMVENT THESE PROBLEMS. A SUGGESTED EXAMPLE IS GIVEN BELOW (CONSULT THE SAS MANUAL FOR DESCRIPTIONS OF THESE OPTIONS):

```
// EXEC SAS,OPTIONS='NODYNALLOC',REGION=1280K,SORT=30
```

10) IT IS SUGGESTED THAT THE USER INCLUDE THE 'LENGTH' STATEMENT WHEN CREATING NEW VARIABLES, IN ORDER TO SAVE SPACE AND COMPUTER MEMORY.

11) HEGIS DATA CAN BE MERGED TO THE HS&B FILES BY USING THE FICE CODES THAT ARE CONTAINED ON THE FILES.

12) FOR MANY TABULATIONS, PROC TABULATE PRODUCES THE MOST READABLE OUTPUT. THE SAS USER MAY USE THE FORMAT STATEMENTS (PROVIDED) FOR CLASSIFICATION VARIABLES TO PRODUCE THE ROW VALUES OF TABULATE TABLES.

13) USE THE N.C.E.S. AND N.O.R.C. DEFINED COMPOSITE AND CLASSIFICATION VARIABLES WHENEVER POSSIBLE TO SIMPLIFY PROGRAMMING. THESE VARIABLES REQUIRED MANY HOURS (DAYS) TO CONSTRUCT. FOR MANY OF THE CLASSIFICATION VARIABLES, SOURCES OF DATA FROM OUTSIDE HS&B WERE MERGED INTO THE HS&B DATA TO CONSTRUCT THE VARIABLES.

14) SAS AND SPSS-X SYSTEM FILES ARE NOW INTERCHANGEABLE AT MANY COMPUTER INSTALLATIONS. CONTACT YOUR OWN FACILITY TO OBTAIN THE INFORMATION NECESSARY TO CREATE A SPSS-X FILE FROM SAS AND VICE VERSA.

16) PLEASE NOTE: IN THE SAS SYSTEM FILE AND IN THE SAS CONTROL CARDS, RESERVED CODES (E.G., '8' FOR 'MISSING DATA', '6' FOR 'MULTIPLE PUNCH') ARE NOT RECODED TO MISSING.
